

PRIVILEGED AND CONFIDENTIAL COMMUNICATION SUBJECT TO JOINT DEFENSE AGREEMENT

HONOLULU HIGH-CAPACITY TRANSIT CORRIDOR PROJECT Response to Final EIS Public Comments December 21, 2010					
Comment No.	Date	Commenter	Comment	Response	Issue Previously Addressed
1	6/21/10 Email #1	Ben Ramelb	1. Reference (a) stated that the Project Construction Phasing will not provide early traffic relief. Reference (a) further provided sites for Vehicle Maintenance and Storage facility for each construction phase to support each construction phase. For example, for the Middle Street to Ala Moana Phase, some 40 acres could be obtained along Lagoon Drive to include portions of Keehi Lagoon, Airport Vacant areas alongside Aolele Street and Lagoon Drive. Another potential site is the undeveloped peninsula between Keehi Lagoon Park and Sand Island Road. (reference (a) )	This is duplicative of a previously raised in the Draft EIS. Section 2.5.8 of the Final EIS (page 2-44) describes the Project Maintenance and Storage Facility (MSF) needs for the Project. Only one 40-acre MSF will be needed to support the entire 20-mile alignment (rather than one facility for each construction phase). To clarify, the sites noted in the comment are subject to many restrictions, including a Section 4(f) Evaluation per the Department of Transportation Act of 1966. Section 4(f) protects parks and recreational facilities from the impacts of transportation projects except when there is no feasible and prudent alternative. This applies to Keehi Lagoon Beach Park, Future Middle Loch Park, Pacific War Memorial Site and the Pearl Harbor Bike Path. Because of the size requirements for a MSF, there would be impacts to these recreational properties in this area. In addition, sites along Aolele Street and airport vacant areas may be within the airport runway protection zone. For these reasons, these proposed sites are not feasible alternatives due to park and recreational properties and engineering limitations within the airport's runway protection zone.	Yes, clarification of previous response provided
2	6/21/10	Ben Ramelb	2. The City's response, reference (b), states that	See response to comment 1.	Yes

**Comment [eaz1]:** Respond to comment that a maintenance and storage facility is not needed for each construction phase.

**Comment [eaz2]:** Therefore the sites proposed are not reasonable and feasible alternatives

**PRIVILEGED AND CONFIDENTIAL COMMUNICATION SUBJECT TO JOINT DEFENSE AGREEMENT**

<p align="center">HONOLULU HIGH-CAPACITY TRANSIT CORRIDOR PROJECT                      Response to Final EIS Public Comments                      December 21, 2010</p>					
Comment No.	Date	Commenter	Comment	Response	Issue Previously Addressed
			the "First Phase must be connected to a maintenance and storage facility" and that "No location has been identified closer to downtown with sufficient available land to construct a maintenance and storage facility". Reference (b) makes no mention of the several maintenance and storage sites mentioned by reference (a): namely, Keehi Lagoon Park and vicinity, Aloha Stadium parking lot, a 443 acre vacant site near Leeward Community College and does not state any reason why the Keehi Lagoon potential sites are rejected as viable for a maintenance and storage site. (reference (b))		
3	6/21/10	Ben Ramelb	3.The city intends to condemn business property at the airport (along Aolele and Ualena Streets) and family housing sites at Pearl City, yet will not consider condemning open city and state land at Keehi Lagoon and vicinity.	See response to comment 1.	Yes
4	6/21/10	Ben Ramelb	4. Accordingly, the City's response is incomplete and unacceptable and the Rail project phasing should be revised to include the First Phase of the project to start at Middle Street to Ala Moana Shopping Center instead of from Kapolei to Pearl City.	This is duplicative of a previously raised comment. As discussed in the Final EIS Section 2.10.5 (page 2-46), the limits of the first construction phase from East Kapolei to Pearl Highlands was selected so that the fixed guideway could connect to either maintenance and storage facility site option. This is because system testing and operation could not be completed without access to a maintenance and storage facility. Selection of the vehicle maintenance and storage facility near Leeward	Yes

PRIVILEGED AND CONFIDENTIAL COMMUNICATION SUBJECT TO JOINT DEFENSE AGREEMENT

HONOLULU HIGH-CAPACITY TRANSIT CORRIDOR PROJECT Response to Final EIS Public Comments December 21, 2010					
Comment No.	Date	Commenter	Comment	Response	Issue Previously Addressed
				<p>Community College would allow construction phasing in either the 'Ewa or Koko Head direction from that site. Because right-of-way is anticipated to be available 'Ewa of Leeward Community College before it is available in the Koko Head direction, constructing Koko Head from that location would delay the start of construction and affect project cash flow.</p> <p>The City responded to this comment in its letter to Mr. Ramelb in the Final EIS, Appendix A, page 1985.</p>	
5	7/4/10 Email #2	Ben Ramelb	1. Reference (a) cited that two 3-lane reversible elevated Flyovers, Kamehameha and Nimitz Highway flyovers, would eliminate the traffic bottlenecks at the Middle Street merge, at the H-1/H-2 merge and the p.m. Halawa merge (westbound) at a cost of less than \$600 million (80 percent FHWA funded) versus the cost of the \$6 Billion rail (80 percent Oahu Taxpayer funded), the rail would NOT eliminate any of the above bottlenecks.	<p>This is duplicative of a previously raised comment from Mr. Ramelb to DTS on 12/29/08. As noted in the Final EIS on pages 2-9, 3-27 and 3-34, in Tables 3-9 and 3-10, and in the response to the comments on the Draft EIS, the Nimitz flyover is assumed to be in place in the forecast of future traffic upon which the rail project is based. While it helps, it does not eliminate the traffic bottlenecks referred to in this comment. The flyover also only helps in one part of the corridor while the rail project covers the entire length. The flyover can offer some limited relief, but does not provide for how the traffic will be managed once in the downtown, which is and will be very congested. Rail offers an alternative that avoids the entire congested</p>	Yes

**Comment [eaz3]:** Provide specific FEIS sections and page numbers where this is mentioned in the document.

				roadway system.	
6	7/4/10 Email #2	Ben Ramelb	2. Paragraphs (d) and (e) of reference (b) states that my suggested 3-lane reversible flyovers in reference (a) will not solve the traffic congestion but does not specify the reasons for why the Flyovers will not eliminate the bottlenecks and why the more expensive Rail is the preferred option. The traffic authorities should note that the 3-lane flyovers will have sufficient traffic capacity cited in reference (a) to eliminate the traffic bottlenecks.	<p>This is duplicative of a previously raised comment. See response to comment 5. This comment was also addressed by the City in its letter to Mr. Ramelb in the Final EIS Appendix A, page 1999.</p> <p>As noted in the Final EIS on pages 2-9, 3-27 and 3-34, in Tables 3-9 and 3-10, and in the response to the comments on the Draft EIS, the Nimitz flyover (along with many other roadway projects) is assumed to be in place in the forecast of future traffic upon which the rail project is based. While it helps, it does not eliminate the traffic bottlenecks referred to in this comment. The flyover also only helps in one part of the corridor while the rail project covers the entire length. The flyover can offer some limited relief, but does not provide for how the traffic will be managed once in the downtown which is and will be very congested. Rail offers an alternative that avoids the entire congested roadway system.</p>	Yes
7	7/4/10 Email #2	Ben Ramelb	3. Since the Kamehameha and Nimitz Flyovers are a more effective and less costly transportation option \$600 million x .20 percent = \$120 million (Oahu Taxpayer cost) versus the \$4 Billion Oahu Taxpayer cost for Rail, The Final Environmental Impact Statement MUST be revised to include the Flyovers as a viable	<p>This is duplicative of a previously raised by Mr. Ramelb.</p> <p>It has been thoroughly addressed in the alternatives studied. As noted in the Final EIS on pages 2-9, 3-27 and 3-34, in Tables 3-9 and 3-10, and in the response to the comments on the Draft EIS, the Nimitz flyover (along with many other</p>	Yes

**Comment [eaz4]:** Recommend repeating responses in comments 5 and 6

Comment No.	Date	Commenter	Comment	Response	Issue Previously Addressed
9	7/5/10 Email #3	Ben Ramelb	2. Reference (b), paragraph a) continues to insist that the cost for the Managed Lane Alternative is still \$327 million to \$427 million per mile. Ref. (b) also ignores the fact that a three-lane elevated reversible highway is normally funded 80 percent by the FHWA while the Rail is funded only 20 percent with the rest being paid by the Oahu Taxpayer.	This is duplicative of previously raised comments. The City responded to Mr. Ramelb's comment in its response to comments on the Draft EIS in the Final EIS Appendix A, page 2021. While there is a possibility, there is no guarantee that federal funding would be available for the Nimitz flyover or, if it is, what percentage it might cover. Funding for highway projects is subject to Oahu Metropolitan Planning Organization (OahuMPO), Hawaii Department of Transportation (HDOT) and Federal Highway Administration (FHWA) processes.	Yes
10	7/5/10 Email #3	Ben Ramelb	3. It is concluded that the alternatives analysis-assigned capital cost estimate for the HOT reversible at \$327 Million to \$427 million per mile is grossly incorrect and that a three-lane reversible MLA is estimated to cost not more than \$80 million per mile or \$880 million for 11 miles from the H-1/H-2 merge to downtown Hotel Street.	This is duplicative of previously raised comments. The City responded to Mr. Ramelb's comment in the City's response to comments on the Draft EIS in the Final EIS Appendix A, page 2021. As described in the response to comment letter on the Draft EIS the City recognized the differences between costs in Hawaii compared to other places and the much more comprehensive objectives of the fixed guideway compared to special highway projects that address only segments of the corridor. The alternatives analysis used the same basis of cost estimate for the managed lane option as it did for the fixed guideway. Other Hawaii costs for the managed lane option, such as the ones referenced in your letter have never been substantiated by a	Yes

**Comment [eaz6]:** Is this true for FHWA funding? Or are you talking about the local decision-making process for determining how FHWA formula money is spent.

**Comment [eaz7]:** Such as?

<p align="center">HONOLULU HIGH-CAPACITY TRANSIT CORRIDOR PROJECT                      Response to Final EIS Public Comments                      December 21, 2010</p>					
Comment No.	Date	Commenter	Comment	Response	Issue Previously Addressed
				credible estimate. As stated in the City Council's Transit Advisory Task Force Report, a committee was charged with reviewing cost estimates for the two alternatives involving construction (the Managed Lane Alternative and Fixed Guideway Alternative). The report states that "the Task Force agrees with this committee that the Alternatives Analysis' construction cost estimates were fairly and consistently prepared, and that they may be used for both planning and cost comparisons." Information was obtained by the Task Force from the Hawaii Department of Transportation and others familiar with managed lane facilities. It is the only estimate to date that addresses Honolulu conditions.	
11	7/5/10 Email #3	Ben Ramelb	1.It is recommended that the DEIS be revised to show a lower cost for the Managed Lane Alternative (Elevated three-Lane reversible), including Table 2-1, as depicted in <a href="http://www.eng.hawaii.edu/~panos/UHCS.pdf">www.eng.hawaii.edu/~panos/UHCS.pdf</a> . and that the MLA be reinstated into the DEIS for consideration as a viable Mass Transit Alternative.	This is duplicative of previously raised comments. The City responded to Mr. Ramelb's comment in the City's response to comments on the Draft EIS in the Final EIS Appendix A, page 2021. This response to the Draft EIS comment recognized the differences between costs in Hawaii compared to other places and the much more comprehensive objectives of the fixed guideway compared to special highway projects that address only segments of the corridor. The alternatives analysis used the same basis of cost estimate for the managed lane option as it did for the fixed guideway. Other Hawaii costs for the managed	Yes

Comment No.	Date	Commenter	Comment	Response	Issue Previously Addressed
				were substantially the same as those already studied, as noted in Chapter 2.	
14	7/12/10	Raymond A. Apana	1. Why are there 3 stations between Aloha Tower and Ala Moana Center?	As noted in the Final EIS, Section 2.5, there are four stations between Aloha Tower and Ala Moana Center. They are located on Nimitz Highway at Alakea Street (Downtown Station), on Halekauwila Street at South Street (Civic Center Station), at Halekauwila Street at Ward Avenue (Kaka'ako Station) and on Kona Street at Kona Iki Street (Ala Moana Center Station). Based on the analysis of travel demand, these locations have high ridership and serve significant existing and future activity centers.	Yes
15	7/7/10	Raymond A. Apana	2. I thought federal security didn't want the rail to pass the Federal Bldg. on Ala Moana Blvd	As noted in the response to the GSA in the Final EIS Appendix A, page 147, the City has worked with GSA, DOE and the US Marshals to identify security improvements that address the concerns noted during the Draft EIS comment period.	Yes
16		Raymond A. Apana	3. Why does the rail have to go all the way to Ala Moana Shopping Center when it already passes Pearl Ridge Shopping area?	This issue was previously addressed in the Final EIS. Ala Moana is not only a shopping destination, but a major employment and residential destination as well as stated on page 1-9 of the Final EIS. As stated in the Final EIS Section 2.5 Ala Moana Center is the logical Koko Head terminus because as O'ahu's largest shopping center it is a major activity center. Ala Moana Center also is a major transit hub with more than 2,000 weekday bus trips. The Koko Head terminus will allow riders	No

<p align="center">HONOLULU HIGH-CAPACITY TRANSIT CORRIDOR PROJECT Response to Final EIS Public Comments December 21, 2010</p>					
Comment No.	Date	Commenter	Comment	Response	Issue Previously Addressed
				to link to the major employment centers and traffic generators in the area. It is also the most heavily used station in the system as shown on Figures 3-9 and 3-10 in Chapter 3 of the Final EIS.	
17	7/7/10	Raymond A. Apana	4. Is it going to upset traffic going to Kakaako and Ala Moana Beach Park area?	This issue was previously addressed in the Final EIS. The Final EIS Section 3.4.3, page 3-47 discusses the Project's effect on streets. The rail system will be elevated along Halekauwila, Queen and Kona Streets and should have minimal effect on street traffic to and from the Kakaako and Ala Moana Beach Park areas.	Yes
18	7/7/10	Raymond A. Apana	5. Governor Lingle wants it (guideway) on the ground and wants a flyover from Nimitz (Keehi Interchange) to Iwilei. I think it's a good idea, only keep 2-story freeway all the way to Aloha Tower and turn Hawn Electric terminal into main rail terminal and where the freeway ends and the down ramp fees straight into Ala Moana Blvd. helping people working the Ala Moana and Waikiki Area.	This is duplicative of previously raised comments. The reasons for the elevated guideway option and why it works better than the at-grade option are discussed in the Final EIS in Section 8.6.13. The Nimitz Flyover is included in the assumptions that led to the selection of the fixed guideway as the preferred alternative in the EIS. Other roadway concepts indicated in the comment do not address the purpose and need of the project and provide limited benefit with the 20-mile corridor.	Yes
19	7/7/10	Raymond A. Apana	6. If the two story freeway connects from Keehi to Aloha Tower, the rail tracks can run alongside from Kapolei on the H 1 all the way to the Aloha Tower cantilevered or supported next to it. The track running from Kapolei to Aloha Tower on the makai side of the freeway and the Aloha	While this alternative was not specifically studied as described and was not proposed during EIS scoping period in 2007, the components of it were part of the Alternatives Analysis, though rail and highway options were evaluated separately. This combined alternative would have major impacts	No

Comment [eaz8]: Page or section number?

**PRIVILEGED AND CONFIDENTIAL COMMUNICATION SUBJECT TO JOINT DEFENSE AGREEMENT**

<p align="center">HONOLULU HIGH-CAPACITY TRANSIT CORRIDOR PROJECT                      Response to Final EIS Public Comments                      December 21, 2010</p>					
Comment No.	Date	Commenter	Comment	Response	Issue Previously Addressed
			Tower track to Kapolei on the Mauka side. This would be good to help with traffic at the stadium doing the football season with a stop at the mauka side to the stadium.	within the corridor and would be cost-prohibitive given the major structures required to carry both roadways and rail. The alternatives for individual modes face funding challenges that would be exacerbated by combining them.	
20	7/7/10	Raymond A. Apana	7. With the tracks following the freeway, the businesses at Aolele and Ualea don't have to not to mention businesses and private to be condemned at a lot of cost, not to mention moving runway #4 at the airport. Of course part of Nimitz would be involved and an off ramp at Waiakamilo for the Young Bros shippers, Costco, Home Depot, Best Buy and pretty soon Loews. Sand Island off ramp helps H1 to continue, Sand Island, and Dillingham. Nothing is more ugly and costly than a free standing.	While this alternative was not specifically studied as described and was not proposed during EIS scoping period in 2007, access is very difficult along the freeway. Both buses and people have difficulty getting into and out of the stations as well as to and from their destinations if the rail line is within the freeway corridor. The rail line and transit in general works best when it can be readily accessed from adjacent land uses or bus service.	No
21	7/7/10	Raymond A. Apana	8. Talk about cost, why must the stations be so elaborate?	Stations, which are subject to a public workshop design process to help define the critical elements that will tie them to the local neighborhoods, are being reviewed to ensure they are well designed and cost-effective.	No
22	7/7/10	Raymond A. Apana	9. Why not platforms with railing same height of the tracks?	The platforms and vehicle doors are being designed to be at one level to permit easy access to all, including wheel chair-bound riders.	No

**PRIVILEGED AND CONFIDENTIAL COMMUNICATION SUBJECT TO JOINT DEFENSE AGREEMENT**

<p align="center">HONOLULU HIGH-CAPACITY TRANSIT CORRIDOR PROJECT Response to Final EIS Public Comments December 21, 2010</p>					
Comment No.	Date	Commenter	Comment	Response	Issue Previously Addressed
23	7/7/10	Raymond A. Apana	10. The stairs or escalator or elevators could go to a waiting room below the platform to shield from the wind, rain and sun. When the rail is coming that is showing on the tv below, just go up to the platform.	Some stations will have a concourse below the boarding platforms. All stations will have a cover at the platform level that provides shade and protects riders from precipitation. They will also have walls to protect from the wind yet still be open for natural ventilation. Allowing natural ventilation will help keep station costs down.	No
24	7/7/10	Raymond A. Apana	11. The displaced Hawn Electric facility should be moved to the back end of Kalihi Valley to generate enough power for East Oahu to Waikiki to Kaimuki to Manoa to downtown to airport. Let Waiau and Kahe take care of the windward, northshore, Waianae coast, and West Oahu.	Comment noted. The energy production plan for Oahu is beyond the scope of this Final EIS.	Issue not relevant to Project
25	7/14/10	Anthony Scarpelli	Why doesn't the Final EIS address the Ho'opili residential rezoning that was denied by the state and federal government?	The Final EIS assumes there will be development in the Ho'opili in the future area and Appendix J discusses the Project's relationship to development.	Yes
26	7/14/10	Anthony Scarpelli	Why wasn't the O'ahu Railway & Land (OR&L) Co route discussed in the draft and final EIS?	The OR&L alignment was evaluated early in the Alternatives Analysis phase and found to be inadequate for the Purpose and Need of the project. Much of the alignment is along the water, which only allows single side access and reduces its functionality. The right-of-way is also very narrow and even non-existent in places so that it no longer constitutes a continuous route. This alignment	Yes

PRIVILEGED AND CONFIDENTIAL COMMUNICATION SUBJECT TO JOINT DEFENSE AGREEMENT

HONOLULU HIGH-CAPACITY TRANSIT CORRIDOR PROJECT Response to Final EIS Public Comments December 21, 2010					
Comment No.	Date	Commenter	Comment	Response	Issue Previously Addressed
				would not meet the Project purpose and need, and therefore, was dropped from consideration during the evaluation of alternatives, prior to preparing the Draft EIS. The alignment also has greater impacts on historic and natural resources. Because of its location along the water, it is also affected by much more stringent federal and state permit requirements that make it much more difficult to use than the alternatives.	
27	7/14/10	Anthony Scarpelli	What is the real cost of the rail?	This is duplicative of previously raised comments. Chapter 6 of the Final EIS presents the cost and financial analysis of the project. The Project will cost \$5.5 billion to build in year of expenditure dollars. The project will cost \$77 million a year to operate and maintain in 2009 dollars.	Yes
28	7/14/10	Anthony Scarpelli	Where is the main terminal building going to be located so when future rail segments are added to the current route, passengers will be able to transfer seamlessly from one train to the next?	This issue is addressed in the Final EIS. Section 2.5 of the Final EIS describes the logical termini of the Project. The termini stations of the current project are at Ala Moana Center and at East Kapolei on Kualaka'i Parkway near the future UH West Oahu campus and across from the proposed Kroc Community Center. Future extensions would tie in to these stations.	Yes
29	7/14/10	Anthony Scarpelli	There is no discussion about using the rail system as an alternative for moving items from the Kalaheo Harbor to downtown. If a terminal building was built downtown or at Ala Moana Shopping Center, this would allow the rail	This issue is not the purpose and need of the Project as described in Chapter 1 of the Final EIS. The purpose and need of the current project is to provide faster, more reliable public transportation than can be achieved with buses. Improving	Yes

**Comment [eaz9]:** This did not respond to the comment/question. The question, I believe, is getting at whether there would be multiple intersecting transit lines.

**PRIVILEGED AND CONFIDENTIAL COMMUNICATION SUBJECT TO JOINT DEFENSE AGREEMENT**

			<p>system to serve a dual purpose. During the day as a passenger mover, and between 9 PM to 12PM, the rail could serve as a mover of goods to and from downtown to Kalaeloa Harbor. This would provide another source of income to reduce the cost of the rail system.</p> <p>Response:..</p>	freight movement is not one of the needs or goals of this project.	
30	7/14/10	Anthony Scarpelli	The EIS does not address how many jobs will be created because of the rail during construction, operational, and maintenance phases of the rail project. Therefore there is no way to properly set the budget for the rail project. The EIS should state how many personnel will be required to support the different phases of the rail project. Mayor Mufi Hanneman states the rail will generate 17,000 jobs. UH- Manoa states the highest number of jobs will be 4,000.	The analysis completed for the EIS shows that the project will generate about 10,000 jobs a year on average. This is discussed in the Final EIS in Chapter 4, Section 4.18.1. This is consistent with the experience on similar projects on the Mainland.	Yes
31	7/14/10	Anthony Scarpelli	The city did not get an objective and unbiased budget. The city outsourced the rail budget process to Parsons Brinckerhoff. For the last 20 years, Parsons Brinckerhoff has done all of the rail studies in Honolulu. This time around Parsons Brinckerhoff helps Mayor Hannemann misrepresent the system by calling it Light Rail' when in reality they are designing a fully	The City awards projects on a competitive basis following a request for qualifications or proposals. The name of the type of system being built is not a critical consideration. There is no clear definition of heavy vs. light rail and for purposes of this project, we have used the term "light metro". It is, as the comment suggests, a third rail system which is typical of "heavy rail" in other places, but it will	No

			<p>elevated Heavy Rail system. Another correct term for it is Rapid Transit. Light Rail is a modern tramway that operates at grade or on street lanes. None of this is true for the Mayor Hannemann rail.</p> <p>Cheryl Soon, director of the city's Department of Transportation Services during Mayor Harris's administration said the following in 2000 based on Parsons Brinckerhoff study recommendations on the same corridor that Mayor Hannemann proposes rail today: The light rail transit alternative was dropped because subsequent analyses revealed that Bus Rapid Transit could accomplish virtually all of the objectives of light rail transit at substantially less cost.</p> <p>Response:</p>	<p>use smaller vehicles more consistent with a "light rail" description. The comment made by Ms. Soon was for a different project that was designed to be at-grade because of limited funding. This is duplicative of previously raised comments. The Transportation System Management Alternative that was evaluated during the Alternatives Analysis phase included aspects of Bus Rapid Transit. While this alternative had merit for cost-effectiveness, its overall benefit would be very low. The Final EIS Section 2.2.2 concluded, based on the findings of the Alternatives Analysis, that the Managed Lane Alternative fails to meet the Purpose and Need, as described in Chapter 1 of the Final EIS.</p>	<p><b>Comment [eaz10]:</b> Expand further to say why that option would not work now or link to analysis already conducted that would show that. AA?</p>
32	7/14/10	Anthony Scarpelli	<p>I am reprinting excerpts from an April 23 letter to Honolulu Councilmember Ann Kobayashi from Honolulu Attorney John C. McLaren who wrote 'on behalf of former Governor Ben Cayetano and other unidentified people "according to the May 6 Advertiser as Attachment (1) to this letter. Kobayashi and Cayetano are key supporters of Neil Abercrombie. This shows that Parsons Brinckerhoff do not represent the best interest</p>	<p>This matter has been forwarded to the Procurement Office; it will be addressed in that process.</p>	<p>No</p> <p><b>Comment [eaz11]:</b> Need to discuss whether to have a more developed response.</p>

			of the O'ahu people when it comes to presenting the facts about the rail. I would like to know why the EIS should be trusted since the budget process is questionable and so are the ties of the Mayor and Honolulu City Council to Parsons Brinckerhoff. The allegations contained in the letter have been forwarded to the State procurement office for investigation.		
33	7/18/10	Spencer Leineweber, FAIA President-elect  AIA Honolulu Chapter	I am writing to comment on the two essentially identical letters sent to AIA Honolulu from the Department of Transportation Services (DTS), City and County of Honolulu, on June 11 and June 16, 2010. The responses contained in both these letters are unfortunately very inadequate in addressing the specific issues raised by our organization. We submitted both a letter and a detailed report on December 8, 2008 and February 3, 2009 in response to the Draft Environmental Impact Statement on this project and pursuant to the release of the FEIS.	Chapter 8 of the Final EIS describes the public involvement process. In this instance, a letter was sent to the AIA as a commenter on the Draft EIS as provided for in Hawaii Revised Statutes Chapter 343 and another was sent as part of the distribution required by NEPA prior to the Notice of Availability.	Yes
34	7/28/10	Spencer Leineweber, FAIA President-elect	The comments we recently received in response are generalized and superficial answers that bear limited relationship to the actual concerns raised. We continue to have serious questions	The alternatives were discussed thoroughly in Chapter 2 and 8 of the Final EIS and so noted in the response to AIA.	Yes

**PRIVILEGED AND CONFIDENTIAL COMMUNICATION SUBJECT TO JOINT DEFENSE AGREEMENT**

HONOLULU HIGH-CAPACITY TRANSIT CORRIDOR PROJECT Response to Final EIS Public Comments December 21, 2010					
Comment No.	Date	Commenter	Comment	Response	Issue Previously Addressed
		AIA Honolulu Chapter	about urban design issues and visual impacts on the surrounding neighborhoods impacted by the proposed transit, and to the lack of adequacy in providing thorough and current analysis and review of identified alternatives.  Response:		
35	7/18/10	Spencer Leineweber, FAIA President-elect AIA Honolulu Chapter	Mauka to makai views: The FEIS addresses makai and mauka views in a very general sense when in fact existing legislation protects specific mauka to makai views in the Chinatown District due to its historic character, and protects specific views in both directions along certain corridors in the Capital District.	Special District Regulations in Chapter 21 of the Revised Ordinances of Honolulu include policies that safeguard special features and characteristics of particular districts to allow for their preservation and enhancement, including Chinatown and Hawaii Capitol District. Section 4.8 of the Final EIS evaluated the visual effects of the Project on protected mauka-makai views within the corridor that are protected under City land use regulations.	Yes
36	7/18/10	Spencer Leineweber, FAIA President-elect AIA Honolulu Chapter	The proposed all-elevated alternative is in violation of Honolulu City & County Land Use Ordinance Chapter 21. In the Chinatown Special District, Section 21-9.60-3 protects prominent makai view corridors at Maunakea Street and Nuuanu Avenue. This visual connection between Honolulu Harbor and the heart of Chinatown reflects the historic ties between the two areas.	This is duplicative of previously raised comments. As stated in the FEIS, the Project will not substantially impair the physical connection to the waterfront. The Project will be a dominant visual element that contrasts in scale with the pedestrian environment and substantially changes makai views of Honolulu Harbor from Chinatown.  The Project is consistent with the goals and objectives of the City and County Development	No

Comment No.	Date	Commenter	Comment	Response	Issue Previously Addressed
				Plans. Chapter 21the City's land use ordinance includes the process for development approval within special districts.	
37		Spencer Leineweber, FAIA President-elect AIA Honolulu Chapter	In the Capital Special District, Section 21-9.30-3 protects both mauka and makai views along Ala Moana Boulevard between Punchbowl Street and the Capital District boundary, along Mililani Street and Mall between Halekauwila Street and King Street, along Punchbowl Street between Beretania Street and Ala Moana Boulevard and South Street between King and Pohukaina Streets.	This is duplicative of previously raised comments. This area was analyzed for view protection as was the entire corridor in Section 4.8 of the Final EIS.	Yes
38		Spencer Leineweber, FAIA President-elect AIA Honolulu Chapter	The proposed elevated rail system will cross the view planes protected by legislation. The stations, columns, and elevated rail bed will continuously block these views. Issuance of a Record of Decision (ROD) should not be made until such time as identified alternatives have been fully reviewed and analyzed. The all-elevated system proposed in the FEIS is not in compliance with existing law. Placing anything continuously in these view corridors is in violation of Honolulu City & County Ordinances.	<p>This is duplicative of previously raised comments. The interpretation of the "legislation" is inconsistent with its intent (see response 36). During the Alternatives Analysis, phase, alternatives were evaluated that have differing levels of effect on views.</p> <p>As explained in Section 2.2.2 of this Final EIS at-grade light-rail transit was considered during the Alternatives Analysis process. Although an at-grade light-rail transit option could have reduced the visual impact of the Project in some locations it did not meet the Project's Purpose and Need.</p>	Yes
39		Spencer	AIA Honolulu strongly believes that we must	The City and County Department of Planning and	Yes

**Comment [eaz12]:** Reference where these alternatives were evaluated.

				comments in the summer 2010. The result of these discussion resulted in the final PA. This PA was shared with the consulting parties prior to execution of the PA and comments were solicited from them.	
41		Spencer Leineweber, FAIA President-elect AIA Honolulu Chapter	Alternatives Study: The FEIS does not adequately address all alternatives. AIA Honolulu continues to propose a more flexible rail transit system. Light Rail is capable of running at, below or above grade to accommodate the particular conditions in each community. A complete evaluation of this flexible alternative was not undertaken.	The Final EIS covers the at-grade option and its limitations in any part of the corridor thoroughly in Chapter 8 and the process by which the alternatives were selected in Chapter 2.	Yes Alternatives Analysis process completed and LRT alternative was rejected
42		Spencer Leineweber, FAIA President-elect AIA Honolulu Chapter	Light Rail has been selected in 29 of the last 30 American cities for very good reasons; one of these reasons is the total cost benefit of this energy efficient alternative. The FEIS discussed the benefits in energy savings by using rail rather than cars. However, one must also calculate the energy used to build the system. Our calculations indicate that the “payback” will stretch to over fifty years.	The conditions upon which other cities’ decisions were based are not present in Honolulu. This is discussed in Chapter 8 and in the response to the AIA comments on the Draft EIS. Construction of any transportation system has required energy expenditure. The Final EIS notes there is an impact to build the system. The same is true of highway and other rail options.	Yes
43		Spencer Leineweber,	The unsubstantiated statement in the FEIS (page 2-7) that “excavation to a depth of between 4	This issue has been thoroughly discussed in Chapter 8 of the Final EIS. The minimal depths	Yes

		FAIA President-elect  AIA Honolulu Chapter	and 5 feet would be required for the entire length of the at-grade system to construct track, support”—does not take in to account the actual conditions where at-grade is likely to occur and the experience of other cities that have minimized depth disturbance to 19-24 inches.	alluded to are only for the slab that carries the rails. It does not include the substantial additional depth for the system electrical services and other supporting utilities or utility relocations required.	
44		Spencer Leineweber, FAIA President-elect AIA Honolulu Chapter	On page 2-15, the FEIS confuses rail technology terms by creating a new term “Rapid-rail transit (steel wheel on steel rail)”. Both Light Rail and Heavy Rail are “Rapid-rail transit (steel wheel on steel rail)” systems, yet this is not indicated in the analysis or importantly in the City and County decision making. The proposed Alternative is a Heavy Rail (“hot” third rail) system. This is a system without flexibility. Heavy Rail can only occur in an elevated or below grade system for safety reasons.	There is no clear definition of heavy vs. light rail and for purposes of this Project; we have used the term “light metro”. It is, as the comment suggests, a third rail system which is typical of “heavy rail” in other places, but it will use smaller vehicles more consistent with a “light rail” description. The third rail option to be used in Honolulu requires separation, as noted, or transition to another compatible technology that is not exposed.	Yes, further clarification provided.
45		Spencer Leineweber, FAIA  President-elect AIA Honolulu Chapter	Light Rail was not adequately considered in the FEIS because evaluation assumptions were made that limited evaluation of possible alternatives. The assumption to maintain the status quo of current traffic patterns, lane requirements, and street parking does not allow consideration of a full range of more	The Alternatives Analysis and prior studies considered light rail and found it inappropriate for the Honolulu application. The need to maintain automobile traffic accessibility was not an assumption, but a response to public expectations to increase overall capacity, not just replace it.	Yes

**Comment [eaz14]:** This does not respond to the comment. See earlier response on terminology.

			environmentally beneficial systems.		
46		Spencer Leineweber, FAIA President-elect  AIA Honolulu Chapter	AIA Honolulu urges you to withhold a Record of Decision until the FEIS is complete and all alternatives have been adequately addressed. AIA Honolulu encourages the use of social, environment and aesthetic criteria—as well as economic efficiency—in the design of routes and supporting facilities for all transit modes. Transportation system routes and facilities should support land use objectives—including urban growth management and efficient transit mode linkages—and respect significant human, cultural and natural environments  Response:	The question about alternatives is duplicative of previously raised comments. Chapter 4 of the Final EIS contains the social, environmental, economic, and aesthetic analysis for the Project. The Alternatives Analysis conducted prior to the Draft EIS also took these factors into consideration when examining a variety of high-capacity transit options. For instance, 15 different combinations of tunnel, at-grade, or elevated alignments were considered between Iwilei and Ward avenue. The route ultimately selected (along Dillingham Boulevard, Nimitz Highway, and Halekauwila Street) was determined to serve the greatest number of employment and residential areas (Chinatown, Downtown, and Kakaako) while also minimizing impacts on historic resources and property acquisitions. Providing transit service to urbanizing areas, including the City's second city in Kapolei, is part of the Purpose and Need of the Project.	Yes
47	7/22 Email	Amy Kimura	Please indicate where in the FEIS your replies to my comments in the DEIS are located. I could not find your responses.	The Final EIS Chapter 8 describes the process for responding to comments on the Draft EIS. Appendix A contains a copy of all letters received on the Draft EIS as well as the responses provided to those letters. Letters are indexed and organized	Yes

				by last name. Your submitted letter appears on page 1422 with the City's response letter following.	
48	7/22	Carol K. Lam, Servco Pacific Ltd.	These comments specifically relate to Servco's Kakaako property at 609 South Street (TMK: (I ) 2-1-031-030): Page 5/Item 3 of your letter states, "The current requirement is for a land area of 20 feet by 200 feet and is not expected to impact existing buildings on the Servco property, as reflected in the Final EIS." In our review of the Final EIS, specifically Figure 2-35 Civic Center Station, the required property for the Project is located behind the existing building. The distance from the property line to the back of the existing building is approximately 8 feet. Therefore, the auto repair facility 'will be affected. Further, Table 4-23 Sites Where Hazardous Materials are Used or Stored that Will be Acquired states: "Auto maintenance building and oil AST in acquisition area." For these reasons, we ask that this be clarified for us.	The analysis and design completed to date do not indicate an impact to the Servco operations because the design of the station no longer relies on the mauka access point. The main access building will be located on the makai side of the street with only a small footprint on the mauka side to accommodate an emergency stairway. Should that change, the project will make the necessary accommodations to make the operations whole based on required compliance with the uniform Relocation Act.	Yes ROW negotiations will continue. <b>Comment [eaz16]:</b> More explanation. Is there a better graphic to show why not expecting an impact to servco operations?
49	7/16/10 Letter	Ronald Darby, RAD Engineering, Ltd	Improper transit noise studies could lead to many families suffering excessive noise inside their homes. There could be class action law suits after the mainland consultants and	The Final EIS shows there is less likelihood of a noise concern from the proposed rail system than there is from the existing street. Section 4.10.3 of the Final EIS also notes that there will be a noise	Yes

HONOLULU HIGH-CAPACITY TRANSIT CORRIDOR PROJECT Response to Final EIS Public Comments December 21, 2010					
Comment No.	Date	Commenter	Comment	Response	Issue Previously Addressed
54	7/16/10	Ronald Darby RAD Engineering, Ltd	FTA criteria apply to outdoor human use areas: therefore indoor noise levels were not addressed.	(see response to comment 53)  Noise levels inside homes will not change as the noise generated by the proposed rail system will be generally lower than existing street noise levels which, in general, are closer to homes than the rail guideway.	Yes
55	7/16/10	Ronald Darby RAD Engineering, Ltd	The EIS ignores the noise criteria for inside residential living of other agencies including HUD, FHWA and EPA.  Response:	(see response to comment 56)  FTA's Noise and Vibration criteria consider research conducted by EPA and HUD in developing noise criteria. Appendix B of FTA's Noise and Vibration Assessment goes into detail on the development of FTA's Noise impact criteria curves and how it was influenced by information from EPA and HUD.  Noise levels inside homes will not change as the noise generated by the proposed rail system will be generally lower than existing street noise levels which, in general, are closer to homes than the rail guideway.	Yes
56	7/16/10	Ronald Darby RAD Engineering, Ltd	The actual noise impact on families will be much greater than the EIS shows. Also there will be greater costs in upgrading fenestration and providing air conditioning when necessary.	FTA's noise and vibration analysis process is conservative and takes into account existing noise exposure. In most locations, noise levels inside homes will not change as the noise generated by the proposed rail system will be generally lower	Yes

**Comment [eaz20]:** That is not a true statement.

FTA's Noise and Vibration criteria consider research conducted by EPA and HUD in developing noise criteria. Appendix B of FTA's Noise and Vibration Assessment goes into detail on the development of FTA's Noise impact criteria curves and how it was influenced by information from EPA and HUD.

**Comment [eaz21]:** FTA's noise and vibration analysis process is conservative and takes into account existing noise exposure

				<p>than existing noise levels.</p> <p>Wheel skirts on the vehicles will reduce noise exposure levels to below the impact criteria at five of the eight locations where impacts are predicted (Final EIS Table 4-19). With wheel skirts, three of these residential sites still will experience moderate noise impacts on the fifth through eleventh floors. The moderate noise impact that will occur at the highrise buildings will only be experienced from units above track level on the fifth through ninth floors.</p> <p>The use of sound-absorptive materials under the tracks in these three areas will reduce the project noise exposure at upper floors to below the moderate noise impact threshold.</p> <p>Once the Project is operating, field measurements for noise will be conducted at representative sites. Should the Project's noise impacts exceed the FTA noise impact levels, further mitigation may be implemented on the receivers with the authorization of the property owners.</p>	
57	7/16/10	Ronald Darby RAD Engineering, Ltd	The EIS only consider the mandates of the Federal Transit Administration (FTA) which address only outside noise levels assuming that	<p>(see 56)</p> <p>FTA's noise and vibration criteria are developed to measure noise outside homes and does not</p>	Yes

PRIVILEGED AND CONFIDENTIAL COMMUNICATION SUBJECT TO JOINT DEFENSE AGREEMENT

HONOLULU HIGH-CAPACITY TRANSIT CORRIDOR PROJECT Response to Final EIS Public Comments December 21, 2010					
Comment No.	Date	Commenter	Comment	Response	Issue Previously Addressed
			superior mainland-type closed windows and doors and seals will reduce the outside noise levels to acceptable inside noise levels for family living.	assume a certain reduction in noise from outside to inside the home. However, FTA considers mitigation measures in some specific cases where noise impacts ca not be reduced from measures like wheel skirts or noise barriers.	
58	7/18/10	Daisy Murai	Will the passengers need to pay each time they park their vehicles in the Park & Ride, then the Tram and finally the bus circulators to reach their destinations or Will the single charge be fair to passengers finding their own way to the Transit station or center, ride the tram and get off at another station, but will not need to ride bus circulators to reach their final destination?	There is no plan at this time to impose a fee for park-and-ride parking. The fare for the train will be the same as TheBus with a free transfer. Monthly and annual passes will also be honored.	
59	7/18/10	Daisy Murai	The Drive time when UH Manoa is in session, is only about 10 - 20 minutes longer or 55- 70 minutes in heavy traffic. This is just 3 - 28 minutes longer than if one is to travel by the City's elevated Rail System to Ala Moana Center as mentioned in the BIS. This is the 42 minutes rail travel time only and does not account the time needed to park your vehicle in the Park & Ride Facilities, go up (30 to 80 feet –at Ala Moana Center) to the Boarding Platform to catch the Trams to your station, go down to the	The time of a trip will depend on the origin. From Kapolei, the time will be lower by rail than by car during the peak hour. Closer to UH, the time savings will be less, but will save on parking/gas and will obviate the need to drive. All fixed guideway stations will have escalators and elevators which will ease movement	Yes

**Comment [eaz22]:** This is one of the reasons why FTA develops noise and vibration criteria for outside homes. Our noise impact criteria does not assume a certain reduction in noise from outside to inside the home. Though, that is a mitigation measure considered in some specific cases where noise impacts can not be reduced from measures like wheel skirts or noise barriers.

			<p>ground floor to catch bus circulators to your final destination. I feel this will take much longer than riding the Current City's TheBus, City &amp; Country Express Bus services by the City, other private ExpressBus services, being dropped off or even by driving your own private vehicle(s) to reach Downtown Honolulu from the West side.</p> <p>Response: between the rail platform and the station area.</p>		
60	7/18/10	Daisy Murai	I feel the City's High Capacity Mass Transit is not the ideal solution to Oahu's traffic congestion till 2030 as expressed in the Final EIS.	Of all the alternatives studied, it provides the most effective solution as noted in Chapter 2 of the Final EIS. While the figures used in the Final EIS refer to the year 2030 for forecasting purposes as required by federal guidelines, the construction of the project and the commencement of operations will occur by 2019	Yes
61	7/18/10	Daisy Murai	The Transit Oriented Developments at the Rail Stations and Centers as well as the power stations along the route, may enhance or destroy the Communities it passes through, especially if existing buildings and establishments are displaced for the Rail Alignment.	This is duplicative of previously raised comments about Transit Oriented Development. The indirect effect of development around stations is discussed in Section 4.19 of the Final EIS. There are relatively few buildings displaced by the Project. There are 40 full acquisitions, most of them in one community, and 159 partial acquisitions. These are primarily narrow strips to allow a road to be widened once the guideway is built. The TOD program will work with the local communities to ensure the project supports the local character and	Yes

<p align="center">HONOLULU HIGH-CAPACITY TRANSIT CORRIDOR PROJECT                      Response to Final EIS Public Comments                      December 21, 2010</p>					
Comment No.	Date	Commenter	Comment	Response	Issue Previously Addressed
75	7/15/10 Council testimony	Spencer Leineweber, AIA	The Honolulu Chapter of the AIA (American Institute of Architects) has for the last five years urged the City to consider a light rail system. The transit system should be flexible and contain both elevated and street-level segments.	This is duplicative of previously raised comments. Both elevated and ground level alignments were examined during the alternatives analysis phase. It was determined that an elevated system would be the most effective at meeting the Purpose and Need of the project.	Yes
76	7/15/10 Council testimony	Spencer Leineweber, AIA	The people voted "yes" on rail in 2008 but there was nothing on the ballot about what kind of rail - "only steel on steel. The Department of Transportation Services (DTS) wants to use an electrified third "heavy" rail technology that can only be elevated or underground.	This is duplicative of previously raised comments. While the use of elevated rail is more effective at meeting the Purpose and Need of the project, the statement that it cannot be used in other operating environments is incorrect.	Yes
77	7/15/10 Council testimony	Spencer Leineweber, AIA	We could shave billions off the project cost by putting rail on the ground in certain areas, and by doing so we will protect our precious mauka-makai view planes.	This is duplicative of previously raised comments. This comment has been thoroughly discussed in Chapter 8 of the Final EIS.	Yes
78	7/15/10 Council testimony	Spencer Leineweber, AIA	A supplemental EIS would be required to study this substantially better and cheaper light rail alternative because this combination flexible system was not studied in the FEIS.	This is duplicative of previously raised comments. All reasonable options have been considered and the project addressed in the Final EIS is the most effective in meeting the project's purpose and	Yes

				need.	
79	7/15/10 Council testimony	Spencer Leineweber, AIA	We urge consideration of these other options before a commitment is made by the Mayor to buy heavy rail trains.	This is duplicative of previously raised comments. All reasonable options have been considered and the project addressed in the Final EIS is the most effective in meeting the project's purpose and need.	Yes
80	7/14/10 Council testimony	Wesley Perry	We believe that the Honolulu High-Capacity Transit Corridor Project is 'the single most important project before our generation, and urge the City Council to work to begin construction on the project as expediently as possible.	Comment noted.	N/A
81	7/14/10C Council testimony	Seanna Pieper-Jordan	So, Say Yes to Rail Development!	Comment noted.	N/A
82	7/14/10 Council testimony	Debbie Luning	LOTMA supports the city's initiative to build and operate a high capacity rail transit system to serve the growing transportation needs of our future and supports the Final Environmental Impact Statement for the Honolulu Rail Transit project (FEIS).	Comment noted.	N/A
83	7/14/10	Kyle Shiroma,	The City should not spend roughly \$5.5 billion on	This is duplicative of previously raised comments.	Yes

**PRIVILEGED AND CONFIDENTIAL COMMUNICATION SUBJECT TO JOINT DEFENSE AGREEMENT**

<p align="center">HONOLULU HIGH-CAPACITY TRANSIT CORRIDOR PROJECT Response to Final EIS Public Comments December 21, 2010</p>					
Comment No.	Date	Commenter	Comment	Response	Issue Previously Addressed
	Council testimony	LOTMA	a solution that will make such a minimal difference in traffic congestion, particularly given our county's and state's inability to balance the budget without raising more taxes and fees-not to mention the mounting pension costs that could very well bankrupt the state even without rail.	As document in the Final EIS Chapter 2, the proposed alternative is the most effective at addressing transportation needs in Honolulu and the funding for the project is mostly in place through the imposition of a ½ cent General Use and Excise Tax (GET) surcharge that can only be spent on the project. The difference in the building the project and not building it is not minimal and is much more effective than any other option evaluated. It makes less sense to spend a large amount of money on a less expensive project that offers no effective relief at all.	
84	7/14/10 Council testimony	Kyle Shiroma	It is likely that the proposed Rail Transit system will carry fewer passengers than predicted, thereby rendering all net cost projections incorrect.	This is duplicative of previously raised comments. The forecasts have been completed following specific direction from the FTA as indicated in Chapter 3.2.1 of the Final EIS. Ridership projections are based on assumptions regarding land use and demographic changes between now and 2030. The model is calibrated against collected data to make sure it properly represents travel activity.	Yes
85	7/14/10 Council testimony	Kyle Shiroma	There will most likely be no energy savings with the rail transit system.	This is duplicative of previously raised comments. There is no substantiated basis for this statement. Section 4.11 of the Final EIS shows the energy effects of the project to be beneficial.	Yes
86	7/14/10 Council testimony	Kyle Shiroma	A closer look at the FEIS reveals that the proposed Rail Transit system is not only fiscally irresponsible, but will have minimal impact on	This is duplicative of previously raised comments. It is the most effective option evaluated when compared to managed lanes, additional bus	Yes

**Comment [eaz23]:** Would prefer to explain why there is no basis for the statement than to just say there is no basis for the statement.

Just state why there is a difference of opinion and base that opinion to sections in the FEIS or technical reports or other studies.

			traffic and energy usage. The ridership projections are unreasonable and the estimated 1.7% reduction in auto trips is low for a \$5.5 billion price tag.	service, at grade rail systems, etc. The details of these effects are shown in Chapters 2, 3, 4 and 6 of the Final EIS. Additionally, the 1.7% reduction is island wide; traffic reduction will be substantially higher in the corridor during peak periods.	
87	7/14/10 Council testimony	Barbara Kim Stanton. AARP	AARP believes the rail project is the most viable transit proposal on the table.	Comment noted.	N/A
88	7/14/10 Council testimony	Barbara Kim Stanton. AARP	Safety is always a concern regarding our seniors. We believe that the elevated or exclusive right-of-way will prevent the kind of collisions experienced with on-grade systems.	Comment noted.	Yes
89	7/14/10 Council testimony	Barbara Kim Stanton. AARP	Regarding the routing, we commend the Council for amending the route from Salt Lake to the airport as that is a more frequent destination for seniors as well as the general population.	Comment noted.	Yes
90	Council testimony	Shermon Wong	Rail is transportation infrastructure necessary for our island's quality, growth ~ N ~prosperity. But a significant side benefit is the economic stimulus effect it would bring to our entire state now.	Comment noted.	Yes

**PRIVILEGED AND CONFIDENTIAL COMMUNICATION SUBJECT TO JOINT DEFENSE AGREEMENT**

<p align="center">HONOLULU HIGH-CAPACITY TRANSIT CORRIDOR PROJECT Response to Final EIS Public Comments December 21, 2010</p>					
Comment No.	Date	Commenter	Comment	Response	Issue Previously Addressed
91	7/14/10 Council testimony	Bob Loy, Outdoor Circle	Concerns about View Planes and Community Intrusion - Instead of providing concrete solutions or tangible and measurable mitigation as we believe it should, the FEIS says these negative visual effects will be mitigated through application of design guidelines, intergovernmental cooperation, consulting with communities and through landscaping and tree planting.	This comment is duplicative of previously raised comments. The solutions will vary from place to place. Visual mitigation includes landscaping and treatment for columns and guideway. These are concrete solutions that must be defined at the time of design.	Yes
92		Bob Loy, Outdoor Circle	Street Trees – The FEIS does not specify locations for transplants or new trees. Instead that will be decided later based upon need. There is no mention of how the City will deal with unsuccessful transplants, which likely will be significant.	This issue is addressed in the Final EIS, Section 4.15. The preference is to replant transplanted trees as close to their original location as possible. An allowance will be provided to cover loss of trees that do not survive transplantation.	Yes
93		Bob Loy, Outdoor Circle	The City claims additional trees will be added during final landscaping, but the lack of detail in the FEIS makes it impossible to determine whether these measures will be adequate.	The Final EIS is based on preliminary design and therefore, specific detail regarding final landscaping cannot be developed. Landscaping plan, that will include planting new trees will be developed during final design when there is the	Yes

				detail available to determine which trees will need to be moved. Landscaping plans will be prepared by a landscape architect and will comply with City ordinances.	
94		Bob Loy, Outdoor Circle	Landscape Plans: - With literally no specific information upon which to base a conclusion, it is virtually impossible to determine what the effectiveness of the (landscaping plans) mitigation might be.	Landscaping is a function of the design process and only preliminary design is completed for the Final EIS. This typically does not include landscaping plans.	Yes
95	7/14/10C Council testimony	Bob Loy, Outdoor Circle	It should be clear to most residents that the Honolulu transit system will be a permanent, physical and visual barrier that separates hundreds of thousands of people from the oceanfront. It will create huge, monolithic structures that will forever change the character and livability of many communities through which it will pass. Whatever good it might bring to the city and its people will be at the expense of the beauty of this island and the degradation of the communities and neighborhoods it is supposed to serve.	In most areas, the guideway will be minimally visible through existing development. In other locations, the project can spur improvements that will make the communities better than they are now. But Chapter 4 of the Final EIS recognizes there are locations where the effect could be detrimental to the visual quality of the area.	Yes
96	7/14/10 Council	Hannah Miyamoto	The rail transit will greatly improve access by walkers, cyclists, and transit riders to "jobs,	Comment noted.	N/A

Comment No.	Date	Commenter	Comment	Response	Issue Previously Addressed
			upon; I am sending my comments to you only to meet the requirement. Similar comments (with a different lead paragraph) are being sent to Region IX.		
104	8/4/10 Letter	Frank Genadio	In testimony to the City Council, I called the EIS a "self-fulfilling prophesy" based on false premises and an incomplete analysis. As written, it should be rejected by both the Federal Transit Administration and the Governor of the State of Hawaii.	Comment noted.	Yes
105	8/4/10 Letter	Frank Genadio	The city's justification for a steel wheel on steel rail (SWSR) system is based on the findings of its (so-called) expert panel in February 2008. Everything else in the Final EIS flows from that finding, with the city using it to justify why NO environmental analysis was done for non-SWSR technologies.	This is duplicative of previously raised comments. As explained in comment letters and Chapter 2 of the Final EIS, other technologies for the transit system were eliminated because they were proprietary technologies and they did not offer the proven performance, cost, and reliability offered by the steel wheel on steel rail technology.	Yes
106	8/4/10 Letter	Frank Genadio	This is a flagrant disregard of the Notice of Intent for this EIS, as filed in the Federal Register of March 15,2007, which states that "The draft EIS would consider five distinct transit technologies: Light rail transit, rapid rail transit,	This is duplicative of previously raised comments. As explained in Section 2.2.3 of the Final EIS, the NEPA Notice of Intent requested input on five transit technologies. A technical review process that included opportunities for public comment	

**Comment [az24]:** From EAZ

**Check with legal.**

Be more specific on the technical review process. Provide information on specific reports and links to those reports in the NEPA documents and other supporting technical documents.

Comment No.	Date	Commenter	Comment	Response	Issue Previously Addressed
			the magnetic levitation (mag-lev) system supplier than it did from any SWSR system supplier. There also was no need to select a technology in advance of issuing a Request for Proposals; the more bidders, the better the chance for valid cost and performance comparisons (i.e., a more competitive bidding process than what the city will obtain from the three remaining SWSR suppliers.)		
109	8/4/10 Letter	Frank Genadio	The city, which went ahead with contracting despite lack of federal approval for its project, has been "talking up" the money "saved" with a low bid for the first segment of the guideway, and the likelihood of continued low bids.	FTA has been involved with project decisions, including contracting. The contracts were not done prematurely.	No
110	8/4/10 Letter	Frank Genadio	Can we assume that there will be no future engineering change proposals that increase costs?	This is duplicative of previously raised comments. There is \$1 billion in contingency included in the project budget as described in Chapter 6 of the Final EIS	Yes
111	8/4/10 Letter	Frank Genadio	Does the current bid include the three-foot parapet needed along the guideway for noise mitigation and the sound-absorptive materials? Will system suppliers' costs include the needed wheel skirts and will projected operating costs	This is duplicative of previously raised comments. The parapet wall is included in the cost of the project. As stated in Section 4.10.3, wheel skirts are included in the vehicle specifications.	Yes

**PRIVILEGED AND CONFIDENTIAL COMMUNICATION SUBJECT TO JOINT DEFENSE AGREEMENT**

HONOLULU HIGH-CAPACITY TRANSIT CORRIDOR PROJECT Response to Final EIS Public Comments December 21, 2010					
Comment No.	Date	Commenter	Comment	Response	Issue Previously Addressed
			cover extra lubrication to prevent wheel squeals on curves? (The above are mentioned because none of those measures, covered in the Final BIS, are required for a mag-lev system.)		
112	8/4/10 Letter	Frank Genadio	The Final EIS also mentions potential system extensions of 14 miles and 12 stations (or more). Perhaps rail opponents who claim the \$5+ billion for the currently planned system are thinking about that when they mention a \$10 billion final price.	Comment noted.	No
113	8/4/10 Letter	Frank Genadio	Mag-lev proponents claim at least 20 percent savings on guideway construction and 20-30 percent savings on operations and maintenance (O&M) costs-but a supplier cannot even make a bid. Obviously, savings for 34 miles of mag-lev guideway construction and 30 years of operations would be substantial.	As stated in comment response letters, no comparative mag lev system has been built within the US, therefore there is no data to support cost estimates.	No
114	8/4/10 Letter	Frank Genadio	Because the Final EIS does not contain a full evaluation for each of the qualified rail technologies, it must be rejected because of its failure to meet the Record of Intent.	Not all alternatives specified in the Notice of Intent must be carried forward into the Final EIS if an alternative is found to be superior to the others.	No

**PRIVILEGED AND CONFIDENTIAL COMMUNICATION SUBJECT TO JOINT DEFENSE AGREEMENT**

<p align="center">HONOLULU HIGH-CAPACITY TRANSIT CORRIDOR PROJECT                      Response to Final EIS Public Comments                      December 21, 2010</p>					
Comment No.	Date	Commenter	Comment	Response	Issue Previously Addressed
115	8/4/10 Letter	Frank Genadio	The city has no choice but to prepare a Supplemental EIS.	<p>According to 23 CFR § 771.130, a Supplemental EIS is prepared when the Administration determines that:</p> <p>(1) Changes to the proposed action would result in significant environmental impacts that were not evaluated in the EIS; or</p> <p>(2) New information or circumstances relevant to environmental concerns and bearing on the proposed action or its impacts would result in significant environmental impacts not evaluated in the EIS.</p> <p>Neither of these instances is applicable.</p>	No
116	8/4/10 Letter	Frank Genadio	Would the incurred delay hurt or benefit the rail project? I believe that an EIS that covers all technologies, followed by an open competition among those technologies, will bring O'ahu a more operationally effective system at a lower cost.	Comment noted. The EIS covers steel wheel on steel rail, which is the technology supported by the technology panel.	No
117	8/4/10 Letter	Frank Genadio	I have briefed (to the City Council) and written about 20-mile guideway construction and O&M savings of \$1.5 billion-and not one person in the city administration, its Department of Transportation Services, or the City Council ever	As stated in comment response letters, no comparative mag lev system has been built within the US, therefore there is no data to support cost estimates.	No

HONOLULU HIGH-CAPACITY TRANSIT CORRIDOR PROJECT Response to Final EIS Public Comments December 21, 2010					
Comment No.	Date	Commenter	Comment	Response	Issue Previously Addressed
			station will have significant and detrimental impacts to the PGC and its tenants.	Transportation Building.	
126	8/12/10 Letter	H. Brian Moore, Asset Mgr., Pacific Guardian Center	The Dillingham Transportation Building (DTB) is a National Historic Site. Any project receiving federal funding which impacts the DTB must comply with Federal Standards for Historic Buildings as administered by the Secretary of the Interior. The FEIS does not contain the signed Programmatic Agreement between the City and local consulting parties to resolve negative impacts to the DTB and other historic sites. For this reason we would urge the FTA to not accept the FEIS at this time.	A signed PA is not needed for release of the Final EIS.	Yes
127	8/12/10 Letter	H. Brian Moore, Asset Mgr., Pacific Guardian Center	We are concerned that the close proximity (40 feet) of the elevated guideway structure to the makai facade of the building and the equally close proximity (30-40 feet) of the Downtown Station entrance structure to the makai-Diamond Head corner of the building will block DTB tenants' makai views and significantly iminish the economic value of these spaces.	The view referenced in the comment is of the wall of the HECO electric station. Though it is a matter of personal preference, it unlikely that the Project would affect the economic value of the building related to the view.	Yes

<p align="center">HONOLULU HIGH-CAPACITY TRANSIT CORRIDOR PROJECT Response to Final EIS Public Comments December 21, 2010</p>					
Comment No.	Date	Commenter	Comment	Response	Issue Previously Addressed
128	8/12/10 Letter	H. Brian Moore, Asset Mgr., Pacific Guardian Center	We also remain concerned that noise impacts, particularly on the upper floors of the building, have not been adequately addressed by either the DEIS or the FEIS. Low parapet walls along the edges of the guideway proposed for noise mitigation will direct noise upward and away from ground level but we are concerned that the redirected noise will disturb and interrupt upper floor businesses and make it further difficult to attract and retain tenants in the affected spaces.	This is duplicative of previously raised comments. As noted in the Final EIS Section 4.10, wheel skirts will be included on all vehicles and parapet walls will be part of the guideway design, which will help decrease noise impacts on floors above the guideway.	Yes
129	8/12/10 Letter	H. Brian Moore, Asset Mgr., Pacific Guardian Center	The June 11 letter indicated that the latest station entry design has been changed to direct "pedestrians approaching the entrance primarily through the Dillingham Transportation Building arcade". This represents a change from the scheme detailed in the DEIS (pedestrians walking the length of the plaza) and in our opinion creates a significant impact on the DTB. According to the FEIS (Figure 3-9), 4,690 riders are projected to enter and exit the Downtown station during the 2-hour peak period weekday mornings. We are very concerned about the impact of foot traffic of this magnitude on the arcade. Many of the ground floor tenants cater to Downtown	The mauka station entrance location was selected in part to avoid placing pedestrians in conflict with automobile traffic. However, it does not affect the arcade of the Dillingham Building. Potential station entrance locations on Alakea Street were examined and rejected due to the potential for conflict between pedestrians and vehicles entering and exiting buildings including the Pacific Guardian Center. Approximately 45% of the daily traffic to and from the mauka station entrance will occur during the early morning and late afternoon peak commute periods. Many of the rail patrons will be those who use the services offered in the park-like area.	Yes

**PRIVILEGED AND CONFIDENTIAL COMMUNICATION SUBJECT TO JOINT DEFENSE AGREEMENT**

<p align="center">HONOLULU HIGH-CAPACITY TRANSIT CORRIDOR PROJECT Response to Final EIS Public Comments December 21, 2010</p>					
Comment No.	Date	Commenter	Comment	Response	Issue Previously Addressed
			workers for breakfast and lunch and utilize portions of the arcade for customer to sit and talk in a relatively secluded area. We are concerned that the increased foot traffic through the arcade created by the transit project will lead to a loss of tenants and rental income.		
130	8/12/10 Letter	H. Brian Moore, Asset Mgr., Pacific Guardian Center	According to the FEIS, the area of the plaza which would be appropriated for the mauka Downtown Station entrance has been increased from 2,400 sf to 3,000 sf. We have continuing concern with the DTS's assertion that the Downtown Station entrance "would not eliminate the open space or alter its use." The projected foot traffic to and from the Downtown station has been revised from 2,500 (DEIS Figure 3-10) in the 2-hour morning peak periods to 4,690 (FEIS Figure 3-9).	This is duplicative of previously raised comments. The Project elements, including the guideway and stations, are being designed to minimize their effect on historic resources, existing buildings, roadways and businesses. As indicated in both the Draft and Final EIS, the mauka entrance of the downtown station will be designed to fit carefully within the existing environment, minimizing the effect on the plaza and the Dillingham Transportation Building.	Yes
131	8/12/10 Letter	H. Brian Moore, Asset Mgr., Pacific Guardian Center	As noted in the January 2009 letter, the vast majority of transit riders will use the mauka station entrance due to its direct access to the Central Business District. With the transit system operating daily from 4 a.m. to midnight (trains arriving	All transit stations and facilities, including entrance plazas, will have security cameras and will be patrolled by security guards.	No

**PRIVILEGED AND CONFIDENTIAL COMMUNICATION SUBJECT TO JOINT DEFENSE AGREEMENT**

HONOLULU HIGH-CAPACITY TRANSIT CORRIDOR PROJECT Response to Final EIS Public Comments December 21, 2010					
Comment No.	Date	Commenter	Comment	Response	Issue Previously Addressed
			every 3 - 10 minutes) we are concerned that PGC will require a significant increase in security personnel as well as maintenance staff to keep the plaza area safe and attractive for the use of our tenants.		
132	8/12/10 Letter	H. Brian Moore, Asset Mgr., Pacific Guardian Center	We are also concerned that with limited conveniences within the station (only one restroom, for example) transit riders will turn to PGC facilities (restrooms, drinking fountains and benches) for their needs, particularly during the afternoon rush hour when foot traffic will "bottleneck" on the plaza due to the limited capacity of the station entrance	This is duplicative of previously raised comments. All station access elements, including escalators, elevators and stairs will be designed to serve the peak level of pedestrian traffic. An adequate number of restrooms will be included at each station to meet the anticipated need.	Yes
133	8/12/10 Letter	H. Brian Moore, Asset Mgr., Pacific Guardian Center	We are concerned that the open space of the plaza will be significantly reduced by the 3,000 sf station entrance and support buildings and that the use of the plaza will be changed from a private tenant amenity to a public thoroughfare.	This is duplicative of previously raised comments. As described in the Final EIS, the mauka entrance of the downtown station will be designed to fit carefully within the existing environment, minimizing the effect on the plaza and the Dillingham Transportation Building. The City will work with the Pacific Guardian Center to create a logical pathway for station users that minimizes the effect on the plaza and arcade.	Yes
134	8/12/10 Letter	H. Brian Moore, Asset Mgr.,	The water feature at the makai end of the plaza currently houses the DTB's only common trash	The mauka station entrance will be designed to accommodate the trash enclosure in	Yes

**PRIVILEGED AND CONFIDENTIAL COMMUNICATION SUBJECT TO JOINT DEFENSE AGREEMENT**

<p align="center">HONOLULU HIGH-CAPACITY TRANSIT CORRIDOR PROJECT Response to Final EIS Public Comments December 21, 2010</p>					
Comment No.	Date	Commenter	Comment	Response	Issue Previously Addressed
		Pacific Guardian Center	enclosure. There is no available alternative location for a trash enclosure that is convenient to both the DTB and the 2 office towers. The water feature also screens off views of the roadway and masks traffic noise. Removal of this water feature and the landscaping behind it will open the plaza to the street noise of Nimitz Highway and significantly degrade the quality of the plaza.	approximately the same location. The station entrance will mask traffic noise and screen views of Nimitz Highway in a similar manner as the current water feature.	
135	8/12/10 Letter	H. Brian Moore, Asset Mgr., Pacific Guardian Center	<p>We would not have the concerns mentioned above if the project was changed to light rail transit.</p> <p>We strongly urge the City to consider changing the project technology from "hot" third rail to overhead or underground power wire technology.</p>	As discussed in the Final EIS, the project will be elevated. Section 8.6.13 of the Final EIS states that an at-grade system would remove traffic lanes downtown which would increase traffic in an already congested corridor.	Yes
136	8/12/10 Letter	H. Brian Moore, Asset Mgr., Pacific Guardian Center	<p>This would give the City much greater flexibility in locating stations and routes, minimizing negative impacts associated with transit in urban areas.</p> <p>While an at-grade route on Nimitz Highway may not be advisable, locating an at-grade light rail</p>	This is duplicative of previously raised comments. An at-grade alignment along Hotel Street and a tunnel under King Street were studied during the screening process for the Alternatives Analysis. They were eliminated because they would require acquisition of more parcels and could affect more burial sites. An at-grade system on King or Hotel	Yes

**PRIVILEGED AND CONFIDENTIAL COMMUNICATION SUBJECT TO JOINT DEFENSE AGREEMENT**

<p align="center">HONOLULU HIGH-CAPACITY TRANSIT CORRIDOR PROJECT Response to Final EIS Public Comments December 21, 2010</p>					
Comment No.	Date	Commenter	Comment	Response	Issue Previously Addressed
			system closer to the center of the Downtown on either King or Hotel streets, offers greater convenience to riders and avoids the negative impacts to the PGC detailed above.	Streets would also impact many historic and cultural landmarks, including Iolani Palace. The elevated route studied in the Final EIS will travel down Nimitz Highway and Halekauwila Street and thus will avoid the sensitive resources along Hotel and King Streets. For a detailed discussion on avoidance alternatives for the Downtown station, please refer to Section 5.5.2 of the Final EIS.	<p><b>Comment [eaz26]:</b> An elevated system would also affect historic properties. Is there more information on why these route alternatives were not considered further?</p>
137	8/12/10 Letter	H. Brian Moore, Asset Mgr., Pacific Guardian Center	If the mauka entrance to an elevated Downtown Station must be located within the PGC property, we strongly urge the City to shift the entrance from the makai-Diamond Head corner of the plaza (as shown in FEIS Appendix S, Drawing RP023) to the Ewa side of Alakea Street.	This option has been investigated and does not work as effectively because of limited space and excessive conflicts between vehicles and pedestrians along Alakea St. This is explained in more detail in Chapter 5 of the EIS on pages 5-43 thru 5-48.	<p>Yes</p> <p><b>Comment [eaz27]:</b> See this explained further in XXX analysis.</p>
138	8/12/10 Letter	H. Brian Moore, Asset Mgr., Pacific Guardian Center	The accessory structures needed to bring transit riders from station level to the street could be incorporated into the lower floors of the makai office tower which are used mainly for parking. Concealing these accessory facilities within the makai tower would result in significantly less visual impact to the area and allow more flexibility in the capacity of stairways and escalators. The Ewa lane of Alakea Street (used for parking) could be used for a widened pedestrian walkway and the PGC parking	This is duplicative of previously raised comments. The City will coordinate with property owners near the stations. The station will offer opportunities for design input during the design process. If this option works better and can be accommodated and remain effective in handling the needs of the station and adjacent locations, it can be considered.	Yes, additional detail provided in response

HONOLULU HIGH-CAPACITY TRANSIT CORRIDOR PROJECT Response to Final EIS Public Comments December 21, 2010					
Comment No.	Date	Commenter	Comment	Response	Issue Previously Addressed
			proximity to a rail system, to the airport route are perplexing and make it extremely difficult for us to ensure that our concerns and answers have been satisfactorily responded too.		
142	7/20/10 email	Hawaii's Thousand Friends, Donna Wong	The lack of specificity and thousands of pages including appendices and technical reports is making it extremely difficult and frustrating to review the FEIS to ensure that our concerns regarding the protection of natural and cultural resources have been adequately addressed by the City and County of Honolulu	The response letter addresses all concerns raised in your comment letter and includes references to relevant sections from the Final EIS.	Yes
143	7/20/10 email	Hawaii's Thousand Friends, Donna Wong	We are reviewing the City's response and FEIS to ensure that the City has met its obligation with regard to Environmental and Social Justice since hundreds of individuals and businesses will be negatively impacted by the rails system	Comment noted.	Yes
144	7/20/10 email	Hawaii's Thousand Friends, Donna Wong	While we struggle to comprehensively and thoroughly review the FEIS it is difficult for us to understand how the FTA can agree that the DEIS and the City have met all NEPA requirements.	Comment noted.	Hawaii's Thousand Friends, No

PRIVILEGED AND CONFIDENTIAL COMMUNICATION SUBJECT TO JOINT DEFENSE AGREEMENT

HONOLULU HIGH-CAPACITY TRANSIT CORRIDOR PROJECT Response to Final EIS Public Comments December 21, 2010					
Comment No.	Date	Commenter	Comment	Response	Issue Previously Addressed
145	7/20/10 email	Hawaii's Thousand Friends, Donna Wong	This is especially perplexing since City Transportation Director Wayne Yoshioka has publicly stated that the FEIS "isn't 100 percent complete" and "further work" needs to be done on the programmatic agreement with the federal government, State Historic Preservation Division, and the State Department of Land and Natural Resources on the issue of Hawaiian 'iwi being found along the route.	A final, signed PA is not needed for release of the Final EIS. The PA is still being reviewed by necessary parties and will be signed before issuance of a Record of Decision by FTA.	Yes
146	7/20/10 email	Hawaii's Thousand Friends, Donna Wong	<p>Could you please explain how the FTA was able to approve the FEIS before the above agreements and documents were completed and included in the FEIS?</p> <p>Could you also explain how citizens are supposed to comprehensively respond to this disclosure document when the above agreements and documents are neither completed nor included in the FEIS?</p> <p>.</p>	<p>A signed Programmatic Agreement (PA) was not required to release the Final EIS. As described in Section 4.16.1 in the Final EIS "FTA, SHPO, and ACHP, in coordination with the invited signatories, will finalize this Draft PA prior to the ROD.", This commitment was met by FTA.</p> <p>Concerning the statement made by the transportation director, his statement was not entirely correct about the completeness of the EIS. The NEPA process for Environmental Impact Statements is not officially completed until FTA makes a final agency determination in the form of a record of decision though the work to create the EIS may well be complete. Before FTA issues a Record of Decision, FTA will consider the entire record of the project include comments received on the FEIS and completion of a PA for conclusion</p>	No

**Comment [eaz30]:** The transportation director misspoke. The NEPA process for Environmental Impact Statements is not completed until FTA makes a final agency determination in the form of a record of decision. Before FTA issues a record of decision, FTA will consider the entire record of the project include comments received on the FEIS and completion of a PA for conclusion of the National Historic Preservation Act Section 106 process.

PRIVILEGED AND CONFIDENTIAL COMMUNICATION SUBJECT TO JOINT DEFENSE AGREEMENT

HONOLULU HIGH-CAPACITY TRANSIT CORRIDOR PROJECT Response to Final EIS Public Comments December 21, 2010					
Comment No.	Date	Commenter	Comment	Response	Issue Previously Addressed
				of the National Historic Preservation Act Section 106 process.	
147	7/20/10 email	Hawaii's Thousand Friends, Donna Wong	Could you also explain how citizens are supposed to comprehensively respond to this disclosure document when the above agreements and documents are neither completed nor included in the FEIS?	The FTA extended the review period to provide adequate time for the public to comment on the Final EIS and Draft PA. FTA chose to invite public comment on these specific changes to the Project since the publication of the Draft EIS. FTA also invited comments on the Draft PA that was attached to the Final EIS and sent to consulting parties on November 17, 2010 for a two-week review period.	No
148	7/20/10 email	Hawaii's Thousand Friends, Donna Wong	We are aware that the deadline to respond to the FEIS is July 26 but we are finding that deadline impossible to meet thus we are requesting a 30 - 60 day extension in which to respond.	The comment period was extended to August 26.	
149			N/A		
150	7/20/10 letter	Daisy Murai	The EIS mentions, since one traffic lane is not wide enough to accommodate the support columns of the elevated rail tracks, the neighboring traffic lanes will need to be narrowed to 10 feet wide. This criteria applies only to areas that have existing buildings, not to the open land areas in East Kapolei and other properties the City will acquire.	Your comment about narrower traffic lanes is noted. Lanes were narrowed in order to minimize right of way acquisitions and only where the width remains consistent with acceptable standards.	Yes

**Comment [eaz31]:** Rather than say it is not an official comment period... Although not required for the NEPA process, because there were minor changes in the proposed action since the publication of the Draft Environmental Impact Statement, FTA chose to invite public comment on these specific changes. A draft version of the programmatic agreement was included in the Final EIS and a draft version was sent to consulting parties on November 17<sup>th</sup> for a two-week review period.

Comment No.	Date	Commenter	Comment	Response	Issue Previously Addressed
153	7/20/10 letter	Daisy Murai	The Drive time when UH Manoa is in session, is only about 10- 20 minutes longer or 55 -70 minutes in heavy traffic. This is just 3 - 28 minutes longer than if one is to travel by the City's elevated Rail System to Ala Moana Center as mentioned in the EIS. This is the 42 minutes RAIL TRAVEL TIME ONLY and does not account the time needed to Park your vehicle in the Park & Ride Facilities, go up (30 to 80 feet –at Ala Moana Center) to the Boarding Platform to catch the Trams to your station, go down to the ground floor to catch bus circulators to your final destination.	Figure 3-7 in the Final EIS shows travel times door to door. As shown, travel times will be much shorter in 2030 with the project versus without. Elevators and escalators will be provided at stations.	Yes
154	7/20/10 letter	Daisy Murai	I feel this will take much longer than riding the Current City's TheBus, City & Country Express Bus services by the City, other private Express Bus services, being dropped off or even by driving our own private vehicle(s) to reach Downtown Honolulu from the Westside.	This is duplicative of previously raised comments. Buses and cars are stuck in roadway congestion, which will get worse between today and 2030. Currently many buses do not arrive on time as a result of this congestion. However, the rail system will be elevated. As a result, congestion will not impact the train schedule. This means a trip from East Kapolei to Ala Moana Center will always take 42 minutes, regardless of what occurs on the surrounding roadways.	Yes
155	7/20/10	Daisy Murai	I notice that during Rush Hours both in the	Comment noted.	Yes

**PRIVILEGED AND CONFIDENTIAL COMMUNICATION SUBJECT TO JOINT DEFENSE AGREEMENT**

<p align="center">HONOLULU HIGH-CAPACITY TRANSIT CORRIDOR PROJECT                      Response to Final EIS Public Comments                      December 21, 2010</p>					
Comment No.	Date	Commenter	Comment	Response	Issue Previously Addressed
	letter		<p>morning &amp; afternoon, the buses do have standing room only on their routes, but not all buses in circulation are packed to capacity. If the first bus is crowded, I know there will be other buses following and heading towards Kahala Mall, University of Hawaii, Waikiki, Salt Lake, Ala Moana Center, Liliha, Kailua, Kaneohe, and other destinations. I just wait a few more minutes for the following bus or two at the bus stop, thus avoiding standing and being crushed like sardines in the very first bus on that route. I also notice the number of passengers significantly decrease after or before Rush Hour. The City's Mass Transit System is one of the Best world-wide, as I have heard passengers from other States and Country mention how fortunate Oahu is to have 365 days of bus service - even on Sundays and Major Holidays.</p>		
156	7/20/10 letter	Daisy Murai	<p>These are the reasons I feel the City's High Capacity Mass Transit is not the ideal solution to Oahu's traffic Congestion till 2030 as expressed in Final EIS. In 2030, there will be thousands of the Baby Boomers retired and not needing an elevated Rail Transit.</p>	<p>Those baby boomers will need a way to travel to reach doctor appointments, shopping destinations, and conduct other errands. Many of these retirees will be unable to drive. This transit system provides an alternative.</p>	No

157	7/20/10 letter	Daisy Murai	The Transit Oriented Developments at the Rail Stations and Centers as well as the power stations along the route, may enhance or destroy the Communities it passes through, especially if existing buildings and establishments are displaced for the Rail Alignment. The State will have several traffic congestion projects in place, as well as the City's Traffic Management Center will be in full operation to detangle traffic gridlock.	This is duplicative of previously raised comments. (see response to comment 63) The Draft and Final EIS included many state and city transportation projects. As shown traffic congestion will be much worse without the system. Additionally, this project only acquires 40 full properties and since the system is elevated it will have a smaller impact on communities.	No
158	8/25/10 Letter	Native Hawaiian Legal Corp., David Frankel	We reiterate that the Final Environmental Impact Statement must include an archaeological inventory survey, including subsurface testing, of all areas where (1) stations could be located (b) support pillars could be located and (c) existing underground infrastructure will be moved.	The commenter's statement is an interpretation of the Hawaii Chapter 343 law that is not expressly provided for in the law, The City will conduct an AIS before construction begins in each segment of the project in accordance with the Programmatic Agreement. As stated in Section 4.16.2, an AIS has already been completed for the first construction phase of the project.	<p>Yes- During 106</p> <p><b>Comment [eaz32]:</b> Could we say that we have a different interpretation of Hawaii law?</p> <p><b>Comment [eaz33]:</b> As stated in X section of the FEIS, AIS plans have been completed for X phases.</p>
159	8/25/10 Letter	Native Hawaiian Legal Corp., David Frankel	Not only is the City flirting with disaster in not performing these necessary studies, but it also risks violating HRS § 6E-8 and 6E-42. These provisions require that prior to commencement of a project, DLNR through SHPD shall give its written concurrence and that prior to approval	This is duplicative of previously raised comments. SHPD has been given the opportunity to review and comment through the environmental impact assessment process and Section 106 consultation.	Yes – during 106 consultation

**PRIVILEGED AND CONFIDENTIAL COMMUNICATION SUBJECT TO JOINT DEFENSE AGREEMENT**

<p align="center">HONOLULU HIGH-CAPACITY TRANSIT CORRIDOR PROJECT Response to Final EIS Public Comments December 21, 2010</p>					
Comment No.	Date	Commenter	Comment	Response	Issue Previously Addressed
			of a project, SHPD be given an opportunity to review and comment.		
160	8/25/10 Letter	Native Hawaiian Legal Corp., David Frankel	The rules that implement these statutory provisions require that an archaeological inventory survey be prepared and accepted before the completion of the historic review process. In other words, an agency cannot expect SHPD to give its written concurrence or to have reviewed and commented on a project until an AIS is completed where there is strong evidence that historic sites exist subsurface - as is this case along the transit corridor in Kaka' ako. There are no provisions in any of SHPD's rules allowing for a "phased approach."	There is a difference of opinion in the interpretation of the application of an AIS to a project. The AIS approach was discussed as part of the Section 106 consultation process.	Yes – during 106 consultation
161	8/25/10 Letter	Native Hawaiian Legal Corp., David Frankel	Some officials appear to believe that compliance with section 106 of the National Historic Preservation Act allows the city to ignore the provisions of HRS §§ 6E-8 and 6E-42. The National Historic Preservation Act does not preempt state historic preservation laws. The city and SHPD must comply with these statutory requirements.	This is duplicative of previously raised comments. SHPD has been given the opportunity to review and comment through the environmental impact assessment process and Section 106 consultation.	Yes

172	7/20/10 Letter	Glenn Oamilda	If the Hawai'i state government designated the 'Ewa region as the second city, why would the city government transport people via a massive heavy-elevated-rail transit, a 6 billion dollar system, back and forth daily into an already overly crowded Honolulu district? Is this a rational argument for a need to have rail? Even the city's own Traffic Alternative Analysis data makes no strong convincing argument justifying the real need for a pricy rail system.	Even with the second city, there will continue to be significant travel between downtown and the second city.	 <p>Yes</p>

**PRIVILEGED AND CONFIDENTIAL COMMUNICATION SUBJECT TO JOINT DEFENSE AGREEMENT**

<p align="center">HONOLULU HIGH-CAPACITY TRANSIT CORRIDOR PROJECT Response to Final EIS Public Comments December 21, 2010</p>					
Comment No.	Date	Commenter	Comment	Response	Issue Previously Addressed
173	7/20/10 Letter	Glenn Oamilda	I reiterate again, as the mayor aggressively pushed his massive heavy-elevated rail project, I personally feel less and less optimistic that rail is the answer, and it will work. This rail project is clearly a unilateral, a one-sided approach, based entirely on assumptions, inferences and suppositions with no hard facts.	The EIS and earlier studies present the information on which the decisions for the Project have been based.	Yes
174	7/20/10 Letter	Glenn Oamilda	We sometimes, on an occasion or two, like to use jargons, descriptive languages, like "a dog and pony road show," or "a country revival meeting." Honestly, all those meetings I attended were exactly that. They were all just totally controlled exercises – no input on universal alternative available technologies, i.e., meg lev, rubber-on-concrete, toll-ways, etc.; no opportunity to openly discuss the up-front estimated 6-billion-dollar price tag, and the after perpetual maintenance cost; and No consideration on the different rail transit modes - elevated or surface, and mention of any available local existing infrastructure along the twenty-two-mile route.	This is duplicative of comments previously raised on the Draft EIS. Chapter 2 describes the alternatives selection and evaluation process and Chapter 8 describes the comments and responses to the comments made by the public.	Yes

**PRIVILEGED AND CONFIDENTIAL COMMUNICATION SUBJECT TO JOINT DEFENSE AGREEMENT**

175	7/20/10 Letter	Glenn Oamilda	The mayor cites from its own Traffic Alternative Analysis study that by the year 2030 build out (from start to finish), the public will see an eleven percent (11%) to about twenty-three (23%) reduction in traffic. In my opinion, these are sorry and somewhat depressingly dismal numbers, and not totally convinced that public dollars will be wisely spent. All the data contained in the study are not backed up with real facts but rather put together by city engineers and rail experts just as a counter to rail opponents, not a clear-cut justifiable argument for pushing rail.	This is duplicative of comments previously raised on the Draft EIS. Chapter 2 of the Final EIS describes the alternatives selection and evaluation process. No other option produced the results that the elevated guideway produced. The data are supported by studies and the experience in other communities.	Yes
176	7/20/10 Letter	Glenn Oamilda	In my opinion, enforcing provisions of the 'Ewa Development Plan, will drastically lessen the \$6 billion dollars estimated projected cost by: 1) consider using the old OR&L existing sugar cane street-level train tracks. The route is being used today as a tour attraction goes westward from 'Ewa's Varona Village station to the Ko'olina Resort, soon to be home for the new Disneyland attractions. The old train tracks runs parallel in the same direction as the city's proposed rail alignment, going in an eastward direction through 'Ewa and	This is duplicative of previously raised comments. The OR&L alignment was evaluated early in the Alternatives Analysis phase and found to not meet the Purpose and Need of the Project. Much of the alignment is along the water which only allows single side access which reduces its functionality. The right-of-way is also very narrow and even non-existent in places so that it no longer constitutes a continuous route. The alignment also has greater impacts on historic and natural resources. Because of its location along the water, it is also affected by much more stringent federal and state permit	N/A

Comment No.	Date	Commenter	Comment	Response	Issue Previously Addressed
			measures for one building, 1133 Waimanu. Beyond that the FEIS does not include a discussion of noise impact or noise mitigation measures for other buildings adjacent to the proposed guideway. We expect decisions about Oahu's traffic problems and solutions based on complete, accurate and current information.	Not all buildings were evaluated under this methodology. However, enough buildings were evaluated to determine project noise impacts.  To mitigate noise impacts, specifications for transit vehicles will include wheel skirts, which will reduce noise impacts to high rise buildings along the project alignment. As shown in Figure 4-56, noise measurements were taken at 6 locations between the Civic Center and Ala Moana Center stations. There were 2 locations that would experience "moderate" impacts and sound absorptive materials will be used near both of those locations.	
193	8/14/10 letter	Residents Along the Rail, James Schlosser, Chairperson	<p>The FEIS is noncompliant in the selected zoning of the Kaka'ako neighborhood and therefore noncompliant with noise reading limitations. We are reminding you of this violation and hold you accountable for your decision.</p> <p>Response: This comment is not clear with regard to exactly what "non compliant in the selected zoning of the Kakaako neighborhood" means. The "violation" cannot be responded to without more information about the concern. If the issue is the description of the neighborhood in the EIS, it was stated in the context of the noise analysis in the Noise Technical Report.</p>	<p>FAA presented information to the City and FTA on what changes would need to be made at the airport to accommodate the required clearance distance at the end of the runways. It was the City's decision, when fronted with the cost and potential environmental impacts of making these changes to refine the alignment.</p> <p>The FAA, not the Hawaii DOT, provided information that resulted in the alignment refinement to avoid designated airspace safety restrictions.</p>	Yes

**Comment [eaz38]:** I do not think this is a correct statement that FAA caused a shift in alignment.

FAA presented information to the City and FTA on what changes would need to be made at the airport to accommodate the required clearance distance at the end of the runways. It was the City's decision, when fronted with the cost and potential environmental impacts of making these changes to shift the alignment over a street.

194	8/14/10 letter	Residents Along the Rail, James Schlosser, Chairperson	State Transportation Director Dr. Brennon Morioka held the City & County accountable to this rule with the selection of the guideway that violated FAA airspace requirements at the Honolulu Airport and community noise standards under HAR46-11-4.		Yes
195	8/14/10 letter	Residents Along the Rail, James Schlosser, Chairperson	Comment #3: Our concerns about long-term solutions to Oahu's traffic problems are based on the principle that good governance demands transparency and up-to-date information with a professional analysis of that information. At a minimum this professional review should include a detailed conclusion of benefits versus costs for each alternative technology and a rationale for the proposed technology solution of choice. Currently the citizens of Honolulu have a proposed rail system that is not based on accurate information, but is based on inappropriate political considerations.	As explained in Section 2.2.3 of the Final EIS, the NEPA Notice of Intent requested input on five transit technologies. A technical review process occurred, which allowed opportunity for public comment. The panel selected steel wheel on steel rail technology by a 4 to 1 vote. Not all alternatives specified in the Notice of Intent must be carried forward into the Final EIS if an alternative is found to be superior to the others. FTA has found that the Final EIS fulfills all requirements.	Yes
196	8/14/10 letter	Residents Along the Rail, James Schlosser, Chairperson	Comment #4: Residents Along the Rail urges you to withhold a Record of Decision until (1) the FEIS accurately characterizes our Kaka'ako community and its zoning is corrected, (2) the	(1 and 2) The analysis of the Kaka'ako areas for purposes of traffic, visual and noise analyses does not require a building by building accounting. 			sustaining? 8. The rail planned and designed in Puerto Rico by the same company advising the City is reported to be a major disaster. How will the same or similar mistakes of overestimated ridership and under-estimated costs be prevented from reoccurring?		
199	8/15/10 Letter	Richard W. Ubersax	Recent reports by FTA and correspondence between FTA and the City clearly indicate FTA's concerns about the robustness of the last-published financial plan for the Project (i.e., Financial Plan for Entry into Preliminary Engineering Submittal, August 2009). The FEIS does not reflect these concerns, and the City continues to contend that the "the rail project is on solid financial footing".	The FEIS reflects the information submitted as part of the application to enter Preliminary Engineering as is appropriate. FTA will not allow the project to enter into Final design until it has issued a record of decision (ROD), but does not require an updated financial plan until the project requests entry into Final Design which would contain more refined cost and revenue information based on more detailed preliminary engineering analysis. The City has provided all the financial information required at this time.	Yes
200	8/15/10 Letter	Richard W. Ubersax	The Financial Feasibility section (Chapter 7.5) of the FEIS contains substantive changes from the DEIS.	The only change was the higher ridership and the associated generation of larger user benefits based on adherence to the FTA's process. There are no other major changes made to this section between the Draft and Final EIS.	No
201	8/15/10 letter	Richard W. Ubersax	Using Section 5307 funds to finance the project represents a significant departure from the	As stated in Chapter 6, TheBus service will be expanded with the project and capital and O&M	No

**Comment [eaz39]:** FTA does not permit project sponsors to enter final design until after FTA issues a ROD, FONSI or CE.

			<p>DEIS... The downturn in the economy has resulted in a downward revision in projected GET surcharge revenues by about \$300 million. The City now plans to offset the GET deficit ("as necessary") by reallocation of \$301 million of federal Section 5307 formula funds from the bus ongoing capital revenues program to the rail program. Although this reallocation may fall within the purview of Section 5307 guidelines and City Ordinance 07-001 [which states that capital cost and interest for the Project "shall be paid entirely from general excise and use tax surcharge revenues, interest earned on the revenues, and any federal, state, or private revenues."], at a minimum this would violate the intent and spirit of the ordinance and would certainly be contrary to what the people of Honolulu have been led to believe concerning funding of the Project.</p> <p>The City has assured that the bus program will not suffer from this reallocation, but it has not been forthright in disclosing that the resulting shortfall in the bus program will be made up by redirecting funds from other local revenue sources such as property and/or use taxes, or by floating</p>	<p>costs for enhanced bus service are included in the project budget. Additionally, Section 5307 funds will actually increase as a result of implementation of the Project, which makes it a reasonable project funding option. Under any circumstances, the City will try to minimize the use of 5307 funds if they are needed, but it is an allowable source and consistent with the intended funding program. Bus service will not suffer in the program as presented.</p>

			[for entry into final design]. These elements include the projected revenue stream from the General Excise Tax, the diversion of FTA Section 5307 funds from ongoing capital needs of the bus system, and the increasing share of the City's annual budget that is required to fund the transit system. Were this plan submitted today in support of a request to advance the project into final design, its weakness would likely cause FTA to deny the request".	requirements. It only points out the areas that require additional refinement as the project moves forward.	
205	8/15/10 letter	Richard W. Ubersax	In FTA's "FY 2011 New Starts Financial Assessment", the Project is assigned a Medium rating for the overall "Project Capital Financial Plan" category. But it is extremely concerning that a Low rating is assigned to the sub-category "Capital Cost Estimates, Assumptions and Financial Capacity" (which comprises 50% of overall rating). This low rating reflects FTA's "concerns about revenues, debt capacity, and the City's capacity to absorb potentially large revenue risks"(p.2). It is further elaborated (p.11): "The major factors contributing to this rating are: (i) material downside risks to the GET surcharge revenue forecast, and consequently the inability to cover all debt service cost; (ii) no net debt capacity;	The concern about this factor is recognized, but it is because it is a commentary on the risk potential for a financial plan. The next version of the plan will address the risk element in more detail with more accurate cost estimates and better revenue forecasting. It will satisfy this concern. That is the way the New Starts process works.	Yes

	letter	Circle, Bob Loy, Director	The FEIS states that commercial advertising on the system will be in compliance with State and County laws. However there is no mention of standards or regulations for non-commercial signage, which could be substantial. These issues must be addressed prior to the issuing of a Record of Decision.	cannot be visible outside the vehicles. It could also allow for advertising within the interior of stations.	
220	8/16/10 letter	The Outdoor Circle, Bob Loy, Director	Utility Lines: The FEIS does not address questions raised in TOC's DEIS comments regarding the relocation of high voltage transmission lines along Kamehameha Highway in Aiea as mitigation for the disastrous loss of scenic mauka-makai view planes for residents mauka of the Transit line. Instead, no specific mitigation for the view plane loss is offered. This shortcoming must be corrected before a Record of Decision is issued.	The high voltage lines are already in place and are not a part of the rail project. Because they are not required to be relocated to construct the Project, relocation underground would be considered a betterment and would be the responsibility of the utility company. The City did consider the undergrounding of the lines, but it would add a major additional cost that cannot be accommodated in the Project budget.	Yes
221	8/25/10 letter	The League of Women Voters, Charles Carole	DBEDT issued a new Oahu population projection in January, 2008 (attachment # 2). Its revised projection for 2030 is 1,080,700 which is 36,500 less people than the 2004 projection forecast. DBEDT in 2009 (attachment # 3) again revised its population projections. They project the 2030 population to be	The DBEDT forecasts will change continually, but the changes are small compared to the overall City character and composition. While the population goes down, the employment in the corridor goes up. There could be a small loss of ridership. It is small because the two demographic changes offset each other.	

**Comment [eaz40]:** This is not a correct statement. If it is deemed that relocating these high voltage lines was to mitigate adverse impacts of the project, FTA funding could be used.

To what extent did the City look into relocating the high voltage transmission lines?

The City did look into the undergrounding of the lines, but it was prohibitively costly. It was also considered to place the lines inside the guideway structure, but that was not found to be feasible

**Comment [eaz41]:** What was the new starts information based on? What forecasts?

The City used DBEDT forecasts (Oahu MPO) as distributed to the zonal level by DPP.

			review of relevant information, data, and analysis.	after the DEIS review period.	
240			The consultants who prepared the EIS do not understand the Hawaii State EIS requirements set forth in HRS 343, applicable agency administrative rules, and applicable administrative and judicial rulings. The State of Hawaii has rejected final EIS for minor shortcomings. If this EIS is accepted, I expect that the Courts will overturn the acceptance of the Final EIS.	HRS Chapter 343 is properly addressed in the document as well as NEPA.	No
241	8/26/10 email	Robert Rodman	The steel on steel rail technology chosen will create a huge amount of noise. To mitigate this noise the city is planning to build a 3 foot barrier on each side of the track all along the length of the track. This mitigation plan will only shoot the sound upwards and impact thousands of residences in towers which line the track and the barrier will add to the visual curtain created by the track. This is unacceptable.	As stated in Section 4.10.3 the 3-foot parapet wall will be included on the guideway to decrease sound exposure for areas below the guideway, while sound absorptive material under the tracks will be used to reduce noise exposure to upper building floors to below moderate impact levels. In addition, vehicle specifications for the project will include wheel skirts to reduce sound impacts for areas above the guideway. With these design features and mitigation, there will be no negative noise impacts as a result of the project.	Yes

<p align="center">HONOLULU HIGH-CAPACITY TRANSIT CORRIDOR PROJECT                      Response to Final EIS Public Comments                      December 21, 2010</p>					
Comment No.	Date	Commenter	Comment	Response	Issue Previously Addressed
252	8/27/10 email	Dale Moyen	To address the concerns about aesthetics / blockage of view planes and steel wheel noise, why don't we implement a Monorail system like Las Vegas and Disney? The single rail and rubber wheels would solve those 2 concerns and would attract ridership like a ride at Disneyland. Plus, with Disney building their Resort at Ko'Olina, maybe they would cost share to bring the Monorail all the way to Ko'Olina! And what a promotional opportunity that would be for their new Disney Resort.	The monorail was one of the technologies considered during the preparation of the draft EIS and was rejected based on its performance characteristics (reliability and cost) and history.	Yes
253	8/27/10 email	Dale Moyen	The Stations MUST have Park & Ride lots with large enough parking capacity for people like me to drive to the lot and ride the train. The bus does not come into my neighborhood. I would have to walk a mile, catch the small HandiVan type bus to Kapolei, and then transfer to another bus to the Kapolei station if there is no Park & Ride there. Without large Park & Ride lots, rail will not attract daily H1 commuters like me. Convenience is key to success.	Four stations on the line, most at the west end of the project will have park and ride facilities. Park-and-ride facilities will be located at the East Kapolei and UH West Oahu Stations.	Yes
254	8/26/10 letter	HonoluluTraffic.com, Cliff Slater	We detailed our objections to the biased way that the City and Parsons Brinckerhoff evaluated the Managed Lane Alternative (MLA) in Part I of	This comment is duplicative of previously raised comments and is discussed in Chapter 2 and Chapter 8 of the Final EIS. <p align="center">HONOLULU HIGH-CAPACITY TRANSIT CORRIDOR PROJECT                      Response to Final EIS Public Comments                      December 21, 2010</p>					
Comment No.	Date	Commenter	Comment	Response	Issue Previously Addressed
268	8/26/10 letter	HonoluluTraffic.com, Cliff Slater	The 4(f) process appears to have been completed with little or no input from the "officials with jurisdiction." For example, the potential use of land from Section 4(f) properties was not evaluated during the Alternatives Analysis stage. The closest evaluation of historic properties was the Alternatives Screening Memo issued at the time of the Alternatives Analysis. The Memo does not mention section 4(f) or its requirements to avoid 4(f) properties. Had the Section 4(f) process been followed as required by statute, then a different alternative might well have been chosen that would have avoided the historic downtown area altogether.	<p>Section 4(f) analysis considered all feasible and prudent alternatives to avoid a use of Section 4(f) properties regardless of whether they were previously dismissed in the alternative analysis phase. Alternatives were developed to avoid impacts to parks and historic properties wherever possible since the beginning of planning and project design.</p> <p>The Section 4(f) evaluation included officials with jurisdiction throughout its development, including written concurrence when required by these agencies per 23 CFR 774.</p> <p>For your information, the alternatives analysis did, however, address potentially affected historic, archaeological, park and cultural resources and the alignment preferences were selected based in part on that information.</p>	No
269	8/26/10 letter	HonoluluTraffic.com, Cliff Slater	Why did the FTA official not coordinate the section 106 process with the reviews required by section 4(f) and thus avoid impacting historic properties?	The FTA did coordinate the Section 106 process according to the NHPA requirements and Section 4(f) in accordance with CFR 774 as documented in Chapters 4 and 5 of the Final EIS.	Yes
270	8/26/10 letter	HonoluluTraffic.com, Cliff Slater	The City and PB have tried everything in an attempt to prove that the reason for the second Notice of Intent and second Scoping was	The NOI and scoping were conducted as provided for in NEPA.	Yes

			legitimate and not merely a subterfuge to eliminate the Managed Lane Alternative.		
271	8/26/10 letter	HonoluluTraffic.com Cliff Slater	<p>The City Response to our comments on the DEIS, page 4, discusses the legitimacy of a second scoping process, citing both an FTA 2006 Guidance and the 2006 SAFETEA-LU Environmental Review Process Final Guidance. We can find no discussion in these documents about a second Scoping, let alone a justification for dismissing a previously successfully scoped alternative.</p> <p>Further, the Final EIS states that, "The City Council eliminated the Managed Lane Alternative from consideration when it selected the Locally Preferred Alternative on December 22, 2006."</p> <p><a href="http://www.honolulutraffic.com/Bill79Final.pdf">http://www.honolulutraffic.com/Bill79Final.pdf</a></p> <p>This is not correct. At the time of the LPA vote, the City Council understood that, according to the then current Notice of Intent, Scoping Notice and Scoping Report, the Managed Lane Alternative would be studied in the Draft EIS. Only later, with the unexpected issuance of a second Notice of Intent and Scoping Notice was anyone aware that the MLA had been eliminated.</p>	Scoping for the DEIS was done in accordance with the requirements of NEPA and did not result in an MLA option different from that eliminated in the alternatives analysis. The scoping completed for the alternatives analysis was conducted to define the alternatives to be studied in the alternatives analysis and the alternatives that did not perform well were indeed officially eliminated when the City Council adopted the LPA.	No

			the percentage of Federal financial participation in the entire project. Thus, all the elements and activities of the project, as described in the FFGA will be funded, in part, with Federal funds; and, the requirements attached to the use of Federal funds will apply to each such task, unless otherwise exempted as provided in the applicable laws, regulations and policies.		
276	8/26/10 letter	HonoluluTraffic.com Cliff Slater	Not segmenting the original Locally Preferred Alternative would mean that the City would get far less federal funds for the Minimum Operable Segment and make the MOS even more financially untenable than it is already.	The full LPA is not financially feasible with the funding available, so the federal component of the project has always been the 20-mile East Kapolei to Ala Moana portion of the LPA. The federal funds are similarly not contingent on nor have they ever been tied to the implementation of the full LPA.	No
277	8/26/10 letter	HonoluluTraffic.com Cliff Slater	The lack of any credible rationale in the Final EIS for the City's segmentation of the "planned extensions" from the LPA intimates that the segmentation was done to facilitate funding and acceptance of the Draft EIS since cost and environment issues for the extensions to UH Manoa and Waikiki are proportionally greater than for the Minimum Operable Segment. These combined segments of the project are intended to provide approximately 30 miles of unified rail transit line. The cost and environmental impacts	The full LPA is not financially feasible with the funding available, so the federal component of the project has always been the 20-mile East Kapolei to Ala Moana portion of the LPA. The federal funds are similarly not contingent on nor have they ever been tied to the implementation of the full LPA.	Yes

			alternative or alternatives which were considered to be environmentally preferable.” How this can happen?		
282	8/26/10 letter	HonoluluTraffic.com Cliff Slater	<p>The following two statements in the Final EIS, taken together make a mockery of the NEPA process. The first statement is that, While the Project will be environmentally preferable regarding effects on air quality, energy use, and water quality, the No Build Alternative is the environmentally preferable alternative based on overall consideration of the criteria listed in 40 CFR 1505.2(b). The No Build Alternative would affect fewer historic and cultural resources and waters of the U.S., have no visual impact, and cause no displacements. However, the No Build Alternative does not meet the Purpose and Need for the Project. [ FEIS, 4-3.]</p> <p>The second statement is that, The purpose of the Honolulu High-Capacity Transit Corridor Project is to provide high capacity rapid transit in the highly congested east-west transportation corridor between Kapolei and UH Mānoa, as specified in the ORTP (O’ahuMPO 2007). [FEIS, 1-21].</p>	<p>The Purpose and Need of the Project was developed based on the needs identified from analysis and public input as is required by NEPA. The Oahu Regional Transportation Plan (ORTP) 2030 system planning effort identified the need for improved transit service and the City began the alternatives analysis process to evaluate high-capacity transit alternatives in the study corridor. A range of alternatives was evaluated including the managed lane alternative. As described in the Final EIS in Section 2.2.2 the managed lane alternative would have included express bus service. This section also describes that the Managed Lane Alternative was evaluated during alternatives analysis phase for its ability to meet project goals and objectives related to mobility and accessibility, supporting planned growth and economic development, constructability and cost, community and environmental quality, and planning consistency. Based on the evaluation documented in the Final EIS this alternative did not meet the transportation needs</p>	No

			<p>In short, although the No-Build Alternative (and, by inference, the Managed Lane Alternative) are “environmentally preferable” they are not eligible as they are not “rapid transit,” which FTA defines as heavy rail. So no matter how environmentally preferable a project, if it is not “rapid transit” it will not be preferable? However, that is not consistent with NEPA. To be,</p> <p>“Consistent with NEPA, the purpose and need statement should be a statement of a transportation problem, not a specific solution. However, the purpose and need statement should be specific enough to generate alternatives that may potentially yield real solutions to the problem at-hand. A purpose and need statement that yields only one alternative may indicate a purpose and need that is too narrowly defined.”[23 CFR § 450.336].</p>		
283	8/26/10 letter	HonoluluTraffic.com Cliff Slater	<p>The City selectively takes results from official surveys in an attempt to show that O’ahu residents overwhelmingly prefer rail transit to highway improvements. 			a highly favorable attitude on the part of the public to HOT lanes.		
285	8/26/10 letter	HonoluluTraffic.com Cliff Slater	Reaction to the HOT lanes was very positive overall. From responses, two-thirds of island-wide would reportedly back construction of HOT lanes along parts of Kamehameha Highway and the H-1.	Comment noted. Even a positive response to another option does not obviate a preference for the Rail Project.	No
286	8/26/10 letter	HonoluluTraffic.com Cliff Slater	There is nothing shown in the Final EIS to justify the statement that, "The Project will reduce daily transportation energy demand by 3 percent." (FEIS, Table 4-1).  Since the typical rail transit line shows no energy savings over the average automobile, according to the U.S. Department of Energy, and the Honolulu rail project will be highly directional, it is unlikely that the Honolulu rail project will show energy savings over automobile use.	The EIS shows how that figure is arrived at based on forecasts of use. This calculation is based on the decrease in VMT that will occur as a result of the project.	Yes
287	8/26/10 letter	HonoluluTraffic.com Cliff Slater	As to construction energy use, one has only to use the City's own data to confirm that there will be little energy savings from this rail project. Table 4-21 of the FEIS projects daily savings of	The EIS shows all these figures and their benefit to the City. Construction of any project, including MLA, would require energy use.	Yes

**Comment [eaz50]:** This is not a comment on the FEIS.

**PRIVILEGED AND CONFIDENTIAL COMMUNICATION SUBJECT TO JOINT DEFENSE AGREEMENT**

<p align="center">HONOLULU HIGH-CAPACITY TRANSIT CORRIDOR PROJECT Response to Final EIS Public Comments December 21, 2010</p>

			2,440 million British thermal units (MBTUs) of energy each day for the rail project over the No-Build. However, page 4-206 says the project construction will have energy costs of 7,480,000 MBTUs. This means that it will take ten years of operation to pay back the energy used in rail's construction. And this will only happen if the City is able to show, which it has not done so far, that these savings will actually result from operation.		
288	8/26/10 letter	HonoluluTraffic.com Cliff Slater	The Final EIS does not show, in anything like the level of detail required by statute, a rationale for dismissing the Managed Lane Alternative from the Alternatives Analysis.	The Final EIS addresses the MLA at a level more detailed than is required since it was not an option chosen for further analysis in the alternatives analysis based on poor performance compared to the fixed guideway.	Yes
289	8/26/10 letter	HonoluluTraffic.com Cliff Slater	A more reasonable construction cost projection, a reduction in the number of buses forecast, elimination of most park and ride spaces and, most importantly, the restoration of the zipper lane, would show that the MLA outperforms the fixed guideway rail system both operationally and in its ability to avoid historic properties and native Hawaiian burial places.	This comment is not consistent with the findings of the analysis and no compelling information has been presented to suggest it would change the outcome. Nor was it presented at the time when the opportunity was afforded during the scoping process for the DEIS.	Yes
